5.40 ArcSec::XACMLTarget Class Reference . . . . .	64

# Chapter 1

## Hosting Environment (Daemon) Chain Components Namespace Index

### 1.1 Hosting Environment (Daemon) Chain Components Namespace List

Here is a list of all documented namespaces with brief descriptions:

[ArcSec](#) (ArcRequest, Parsing the specified Arc request format ) . . . . . 7

## Chapter 2

# Hosting Environment (Daemon) Chain Components Hierarchical Index

### 2.1 Hosting Environment (Daemon) Chain Components Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

ArcSec::AllowPDP . . . . .	11
ArcSec::ArcAlgFactory . . . . .	12
ArcSec::ArcAttributeFactory . . . . .	13
ArcSec::ArcAttributeProxy< TheAttribute > . . . . .	14
ArcSec::ArcAuthZ . . . . .	15
ArcSec::ArcEvaluator . . . . .	16
ArcSec::ArcFnFactory . . . . .	18
ArcSec::ArcPDP . . . . .	19
ArcSec::ArcPDPServiceInvoker . . . . .	20
ArcSec::ArcPolicy . . . . .	21
ArcSec::ArcRequestItem . . . . .	23
ArcSec::ArcRule . . . . .	24
ArcSec::CountPDP . . . . .	25
ArcSec::DelegationPDP . . . . .	26
ArcSec::DenyPDP . . . . .	27
Arc::LDAPQuery . . . . .	28
Arc::MCC_HTTP . . . . .	29
Arc::MCC_HTTP_Client . . . . .	30
Arc::MCC_HTTP_Service . . . . .	31
Arc::MCC_SOAP . . . . .	32
Arc::MCC_SOAP_Service . . . . .	33
Arc::MCC_TCP . . . . .	34
Arc::MCC_TCP_Client . . . . .	35
Arc::MCC_TCP_Service . . . . .	36
Arc::MCC_TLS . . . . .	37
Arc::MCC_TLS_Client . . . . .	38
Arc::MCC_TLS_Service . . . . .	39
Arc::PayloadHTTP . . . . .	40

Arc::PayloadTCPSocket . . . . .	45
Arc::PayloadTLSStream . . . . .	46
ArcSec::SAML2SSO_AssertionConsumerSH . . . . .	48
ArcSec::SimpleListPDP . . . . .	49
SRMClient . . . . .	50
SRMClientRequest . . . . .	57
SRMFileMetaData . . . . .	59
ArcSec::UsernameTokenSH . . . . .	60
ArcSec::X509TokenSH . . . . .	61
ArcSec::XACMLPolicy . . . . .	62
ArcSec::XACMLRule . . . . .	63
ArcSec::XACMLTarget . . . . .	64

## Chapter 3

# Hosting Environment (Daemon) Chain Components Class Index

### 3.1 Hosting Environment (Daemon) Chain Components Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">ArcSec::AllowPDP</a> (This PDP always return true (allow) ) . . . . .	11
<a href="#">ArcSec::ArcAlgFactory</a> (Algorithm factory class for Arc ) . . . . .	12
<a href="#">ArcSec::ArcAttributeFactory</a> (Attribute factory class for Arc specified attributes ) . . . . .	13
<a href="#">ArcSec::ArcAttributeProxy&lt; TheAttribute &gt;</a> (Arc specific AttributeProxy class ) . . . . .	14
<a href="#">ArcSec::ArcAuthZ</a> (Tests message against list of PDPs ) . . . . .	15
<a href="#">ArcSec::ArcEvaluator</a> (Execute the policy evaluation, based on the request and policy ) . . . . .	16
<a href="#">ArcSec::ArcFnFactory</a> (Function factory class for Arc specified attributes ) . . . . .	18
<a href="#">ArcSec::ArcPDP</a> ( <a href="#">ArcPDP</a> - PDP which can handle the Arc specific request and policy schema )	19
<a href="#">ArcSec::ArcPDPServiceInvoker</a> ( <a href="#">ArcPDPServiceInvoker</a> - client which will invoke pdpservice )	20
<a href="#">ArcSec::ArcPolicy</a> ( <a href="#">ArcPolicy</a> class to parse and operate Arc specific <Policy> node ) . . . . .	21
<a href="#">ArcSec::ArcRequestItem</a> (Container, <Subjects, Actions, Objects, Contexts> tuple ) . . . . .	23
<a href="#">ArcSec::ArcRule</a> ( <a href="#">ArcRule</a> class to parse Arc specific <Rule> node ) . . . . .	24
<a href="#">ArcSec::CountPDP</a> ( <a href="#">CountPDP</a> - PDP which can handle the Arc specific request and policy schema ) . . . . .	25
<a href="#">ArcSec::DelegationPDP</a> . . . . .	26
<a href="#">ArcSec::DenyPDP</a> (This PDP always returns false (deny) ) . . . . .	27
<a href="#">Arc::LDAPQuery</a> . . . . .	28
<a href="#">Arc::MCC_HTTP</a> (A base class for HTTP client and service MCCs ) . . . . .	29
<a href="#">Arc::MCC_HTTP_Client</a> . . . . .	30
<a href="#">Arc::MCC_HTTP_Service</a> . . . . .	31
<a href="#">Arc::MCC_SOAP</a> (A base class for SOAP client and service MCCs ) . . . . .	32
<a href="#">Arc::MCC_SOAP_Service</a> . . . . .	33
<a href="#">Arc::MCC_TCP</a> (A base class for TCP client and service MCCs ) . . . . .	34
<a href="#">Arc::MCC_TCP_Client</a> . . . . .	35
<a href="#">Arc::MCC_TCP_Service</a> . . . . .	36
<a href="#">Arc::MCC_TLS</a> (A base class for TLS client and service MCCs ) . . . . .	37
<a href="#">Arc::MCC_TLS_Client</a> . . . . .	38
<a href="#">Arc::MCC_TLS_Service</a> . . . . .	39
<a href="#">Arc::PayloadHTTP</a> . . . . .	40
<a href="#">Arc::PayloadTCPSocket</a> . . . . .	45
<a href="#">Arc::PayloadTLSStream</a> . . . . .	46

<a href="#">ArcSec::SAML2SSO_AssertionConsumerSH</a> (Implement the functionality of the Service Provider in SAML2 SSO profile ) . . . . .	48
<a href="#">ArcSec::SimpleListPDP</a> (Tests X509 subject against list of subjects in file ) . . . . .	49
<a href="#">SRMClient</a> . . . . .	50
<a href="#">SRMClientRequest</a> . . . . .	57
<a href="#">SRMFileMetaData</a> . . . . .	59
<a href="#">ArcSec::UsernameTokenSH</a> (Adds WS-Security Username Token into SOAP Header ) . . . . .	60
<a href="#">ArcSec::X509TokenSH</a> (Adds WS-Security X509 Token into SOAP Header ) . . . . .	61
<a href="#">ArcSec::XACMLPolicy</a> ( <a href="#">XACMLPolicy</a> class to parse and operate XACML specific <Policy> node ) . . . . .	62
<a href="#">ArcSec::XACMLRule</a> ( <a href="#">XACMLRule</a> class to parse XACML specific <Rule> node ) . . . . .	63
<a href="#">ArcSec::XACMLTarget</a> ( <a href="#">XACMLTarget</a> class to parse and operate XACML specific <Target> node ) . . . . .	64

## Chapter 4

# Hosting Environment (Daemon) Chain Components Namespace Documentation

### 4.1 ArcSec Namespace Reference

ArcRequest, Parsing the specified Arc request format.

#### Classes

- class **DelegationSecAttr**
- class **DelegationMultiSecAttr**
- class **DelegationSH**
- class [AllowPDP](#)

*This PDP always return true (allow).*

- class [ArcAuthZ](#)

*Tests message against list of PDPs.*

- class [ArcAlgFactory](#)

*Algorithm factory class for Arc.*

- class [ArcAttributeFactory](#)

*Attribute factory class for Arc specified attributes.*

- class [ArcAttributeProxy](#)

*Arc specific AttributeProxy class.*

- class [ArcEvaluator](#)

*Execute the policy evaluation, based on the request and policy.*

- class [ArcFnFactory](#)

*Function factory class for Arc specified attributes.*

- class [ArcPDP](#)  
*ArcPDP - PDP which can handle the Arc specific request and policy schema.*
- class [ArcPolicy](#)  
*ArcPolicy class to parse and operate Arc specific <Policy> node.*
- class **ArcRequest**
- class [ArcRequestItem](#)  
*Container, <Subjects, Actions, Objects, Contexts> tuple.*
- class [ArcRule](#)  
*ArcRule class to parse Arc specific <Rule> node.*
- class [CountPDP](#)  
*CountPDP - PDP which can handle the Arc specific request and policy schema.*
- class [DelegationPDP](#)
- class [DenyPDP](#)  
*This PDP always returns false (deny).*
- class **GACLEvaluator**
- class **GACLPDP**
- class **GACLPolicy**
- class **GACLRequest**
- class [ArcPDPServiceInvoker](#)  
*ArcPDPServiceInvoker - client which will invoke pdpservice.*
- class [SAML2SSO\\_AssertionConsumerSH](#)  
*Implement the functionality of the Service Provider in SAML2 SSO profile.*
- class [SimpleListPDP](#)  
*Tests X509 subject against list of subjects in file.*
- class [UsernameTokenSH](#)  
*Adds WS-Security Username Token into SOAP Header.*
- class [X509TokenSH](#)  
*Adds WS-Security X509 Token into SOAP Header.*
- class **AttributeDesignator**
- class **AttributeSelector**
- class [XACMLPolicy](#)  
*XACMLPolicy class to parse and operate XACML specific <Policy> node.*
- class **XACMLRequest**
- class [XACMLRule](#)  
*XACMLRule class to parse XACML specific <Rule> node.*
- class **XACMLTargetMatch**

- class **XACMLTargetMatchGroup**
- class **XACMLTargetSection**
- class [XACMLTarget](#)

*[XACMLTarget](#) class to parse and operate XACML specific <Target> node.*

## Typedefs

- typedef std::pair< AttributeValue \*, Function \* > [Match](#)
- typedef std::list< [Match](#) > [AndList](#)
- typedef std::list< [AndList](#) > [OrList](#)

## Enumerations

- enum **Id\_MatchResult** { **ID\_MATCH** = 0, **ID\_PARTIAL\_MATCH** = 1, **ID\_NO\_MATCH** = 2 }

## Functions

- Arc::Plugin \* **get\_arcpdp\_alg\_factory** (Arc::PluginArgument \*)
- Arc::Plugin \* **get\_arcpdp\_attr\_factory** (Arc::PluginArgument \*)
- Arc::Plugin \* **get\_arcpdp\_fn\_factory** (Arc::PluginArgument \*)

### 4.1.1 Detailed Description

ArcRequest, Parsing the specified Arc request format.

### 4.1.2 Typedef Documentation

#### 4.1.2.1 typedef std::pair<AttributeValue\*, Function\*> [ArcSec::Match](#)

Pair Match include the AttributeValue object in <Rule> and the Function which is used to handle the AttributeValue, default function is "Equal", if some other function is used, it should be explicitly specified, e.g. Subject Type="string" Function="Match">/vo.knowarc/usergroupA</Subject>Subjects> example inside <Rule>: <Subjects> <Subject type="X500Name">/O=Nordu-Grid/OU=UIO/CN=test</Subject> <Subject type="string">/vo.knowarc/usergroupA</Subject> <Subject> <SubFraction type="string">/O=Grid/OU=KnowARC/CN=XYZ</SubFraction> <SubFraction type="string">urn:mace:shibboleth:examples</SubFraction> </Subject> <GroupIdRef location="/.subjectgroup.xml">subgrpexample1</GroupIdRef> </Subjects>

#### 4.1.2.2 typedef std::list<[Match](#)> [ArcSec::AndList](#)

AndList - include items inside one <Subject> (or <Resource> <Action> <Condition>).

"Or" relationship meand the request should satisfy any of the items <Subjects>  
 <Subject type="X500DN">/O=Grid/OU=KnowARC/CN=ABC</Subject> <Subject type="VOMSAttribute">/vo.knowarc/usergroupA</Subject> <Subject> <SubFraction type="X500DN">/O=Grid/OU=KnowARC/CN=XYZ</SubFraction> <SubFraction type="ShibName">urn:mace:shibboleth:examples</SubFraction> </Subject> <GroupIdRef location="/.subjectgroup.xml">subgrpexample1</GroupIdRef> </Subjects>

#### 4.1.2.3 typedef std::list<[AndList](#)> [ArcSec::OrList](#)

OrList - include items inside one <Subjects> (or <Resources> <Actions> <Conditions>).

## Chapter 5

# Hosting Environment (Daemon) Chain Components Class Documentation

### 5.1 ArcSec::AllowPDP Class Reference

This PDP always return true (allow).

```
#include <AllowPDP.h>
```

#### Public Member Functions

- **AllowPDP** (Arc::Config \*cfg)
- virtual bool **isPermitted** (Arc::Message \*msg)

#### Static Public Member Functions

- static Arc::Plugin \* **get\_allow\_pdp** (Arc::PluginArgument \*arg)

#### 5.1.1 Detailed Description

This PDP always return true (allow).

The documentation for this class was generated from the following file:

- AllowPDP.h

## 5.2 ArcSec::ArcAlgFactory Class Reference

Algorithm factory class for Arc.

```
#include <ArcAlgFactory.h>
```

### Public Member Functions

- virtual CombiningAlg \* [createAlg](#) (const std::string &type)

#### 5.2.1 Detailed Description

Algorithm factory class for Arc.

#### 5.2.2 Member Function Documentation

##### 5.2.2.1 virtual CombiningAlg\* ArcSec::ArcAlgFactory::createAlg (const std::string & type) [virtual]

return a Alg object according to the "CombiningAlg" attribute in the <Policy> node; The [ArcAlgFactory](#) itself will release the Alg objects

The documentation for this class was generated from the following file:

- ArcAlgFactory.h

## 5.3 ArcSec::ArcAttributeFactory Class Reference

Attribute factory class for Arc specified attributes.

```
#include <ArcAttributeFactory.h>
```

### Public Member Functions

- virtual AttributeValue \* [createValue](#) (const Arc::XMLNode &node, const std::string &type)

### 5.3.1 Detailed Description

Attribute factory class for Arc specified attributes.

### 5.3.2 Member Function Documentation

#### 5.3.2.1 virtual AttributeValue\* ArcSec::ArcAttributeFactory::createValue (const Arc::XMLNode & node, const std::string & type) [virtual]

creat a AttributeValue according to the value in the XML node and the type; It should be the caller to release the AttributeValue Object

The documentation for this class was generated from the following file:

- ArcAttributeFactory.h

## 5.4 ArcSec::ArcAttributeProxy< TheAttribute > Class Template Reference

Arc specific AttributeProxy class.

```
#include <ArcAttributeProxy.h>
```

### Public Member Functions

- virtual AttributeValue \* [getAttribute](#) (const Arc::XMLNode &node)

#### 5.4.1 Detailed Description

```
template<class TheAttribute> class ArcSec::ArcAttributeProxy< TheAttribute >
```

Arc specific AttributeProxy class.

#### 5.4.2 Member Function Documentation

**5.4.2.1** `template<class TheAttribute> AttributeValue * ArcSec::ArcAttributeProxy< TheAttribute >::getAttribute (const Arc::XMLNode & node) [virtual]`

Implementation of getAttribute method.

The documentation for this class was generated from the following file:

- ArcAttributeProxy.h

## 5.5 ArcSec::ArcAuthZ Class Reference

Tests message against list of PDPs.

```
#include <ArcAuthZ.h>
```

### Public Member Functions

- **ArcAuthZ** (Arc::Config \*cfg, Arc::ChainContext \*ctx)
- virtual bool **Handle** (Arc::Message \*msg)

### Static Public Member Functions

- static Plugin \* **get\_sechandler** (Arc::PluginArgument \*arg)

### Protected Member Functions

- bool **MakePDPs** (Arc::Config \*cfg)

### Classes

- class **PDPDesc**

#### 5.5.1 Detailed Description

Tests message against list of PDPs.

This class implements SecHandler interface. It's **Handle()** method runs provided Message instance against all PDPs specified in configuration. If any of PDPs returns positive result **Handle()** return true, otherwise false. This class is the main entry for configuring authorization, and could include different PDP configured inside.

#### 5.5.2 Member Function Documentation

##### 5.5.2.1 virtual bool ArcSec::ArcAuthZ::Handle (Arc::Message \* *msg*) [virtual]

Get authorization decision

##### 5.5.2.2 bool ArcSec::ArcAuthZ::MakePDPs (Arc::Config \* *cfg*) [protected]

Create PDP according to conf info

The documentation for this class was generated from the following file:

- ArcAuthZ.h

## 5.6 ArcSec::ArcEvaluator Class Reference

Execute the policy evaluation, based on the request and policy.

```
#include <ArcEvaluator.h>
```

### Public Member Functions

- **ArcEvaluator** (Arc::XMLNode \*cfg)
- **ArcEvaluator** (const char \*cfgfile)
- virtual Response \* **evaluate** (Request \*request)
- virtual Response \* **evaluate** (const Source &request)
- virtual Response \* **evaluate** (Request \*request, const Source &policy)
- virtual Response \* **evaluate** (const Source &request, const Source &policy)
- virtual Response \* **evaluate** (Request \*request, Policy \*policyobj)
- virtual Response \* **evaluate** (const Source &request, Policy \*policyobj)
- virtual AttributeFactory \* **getAttrFactory** ()
- virtual FnFactory \* **getFnFactory** ()
- virtual AlgFactory \* **getAlgFactory** ()
- virtual void **addPolicy** (const Source &policy, const std::string &id="")
- virtual void **addPolicy** (Policy \*policy, const std::string &id="")
- virtual void **removePolicies** (void)
- virtual void **setCombiningAlg** (EvaluatorCombiningAlg alg)
- virtual void **setCombiningAlg** (CombiningAlg \*alg)
- virtual const char \* **getName** (void) const

### Static Public Member Functions

- static Arc::Plugin \* **get\_evaluator** (Arc::PluginArgument \*arg)

### Protected Member Functions

- virtual Response \* **evaluate** (EvaluationCtx \*ctx)

### Friends

- class **EvaluatorContext**

#### 5.6.1 Detailed Description

Execute the policy evaluation, based on the request and policy.

#### 5.6.2 Member Function Documentation

##### 5.6.2.1 virtual Response\* ArcSec::ArcEvaluator::evaluate (Request \* *request*) [virtual]

Evaluate the request based on the policy information inside PolicyStore

The documentation for this class was generated from the following file:

- ArcEvaluator.h

## 5.7 ArcSec::ArcFnFactory Class Reference

Function factory class for Arc specified attributes.

```
#include <ArcFnFactory.h>
```

### Public Member Functions

- virtual Function \* [createFn](#) (const std::string &type)

#### 5.7.1 Detailed Description

Function factory class for Arc specified attributes.

#### 5.7.2 Member Function Documentation

##### 5.7.2.1 virtual Function\* ArcSec::ArcFnFactory::createFn (const std::string &type) [virtual]

return a Function object according to the "Function" attribute in the XML node; The [ArcFnFactory](#) itself will release the Function objects

The documentation for this class was generated from the following file:

- ArcFnFactory.h

## 5.8 ArcSec::ArcPDP Class Reference

[ArcPDP](#) - PDP which can handle the Arc specific request and policy schema.

```
#include <ArcPDP.h>
```

### Public Member Functions

- **ArcPDP** (Arc::Config \*cfg)
- virtual bool **isPermitted** (Arc::Message \*msg)

### Static Public Member Functions

- static Arc::Plugin \* **get\_arc\_pdp** (Arc::PluginArgument \*arg)

### Static Protected Attributes

- static Arc::Logger **logger**

#### 5.8.1 Detailed Description

[ArcPDP](#) - PDP which can handle the Arc specific request and policy schema.

The documentation for this class was generated from the following file:

- ArcPDP.h

## 5.9 ArcSec::ArcPDPServiceInvoker Class Reference

[ArcPDPServiceInvoker](#) - client which will invoke pdpservice.

```
#include <ArcPDPServiceInvoker.h>
```

### Public Member Functions

- **ArcPDPServiceInvoker** (Arc::Config \*cfg)
- virtual bool **isPermitted** (Arc::Message \*msg)

### Static Public Member Functions

- static Arc::Plugin \* **get\_pdpservice\_invoker** (Arc::PluginArgument \*arg)

### Static Protected Attributes

- static Arc::Logger **logger**

#### 5.9.1 Detailed Description

[ArcPDPServiceInvoker](#) - client which will invoke pdpservice.

The documentation for this class was generated from the following file:

- ArcPDPServiceInvoker.h

## 5.10 ArcSec::ArcPolicy Class Reference

[ArcPolicy](#) class to parse and operate Arc specific <Policy> node.

```
#include <ArcPolicy.h>
```

### Public Member Functions

- [ArcPolicy](#) (void)
- [ArcPolicy](#) (const Arc::XMLNode node)
- [ArcPolicy](#) (const Arc::XMLNode node, EvaluatorContext \*ctx)
- virtual **operator bool** (void) const
- virtual Result **eval** (EvaluationCtx \*ctx)
- virtual void **setEvaluatorContext** (EvaluatorContext \*evaluatorcontext)
- virtual void [make\\_policy](#) ()
- virtual MatchResult **match** (EvaluationCtx \*ctx)
- virtual std::string **getEffect** () const
- virtual EvalResult & **getEvalResult** ()
- virtual void **setEvalResult** (EvalResult &res)
- virtual const char \* **getEvalName** () const
- virtual const char \* **getName** () const

### Static Public Member Functions

- static Arc::Plugin \* **get\_policy** (Arc::PluginArgument \*arg)

### Static Protected Attributes

- static Arc::Logger **logger**

#### 5.10.1 Detailed Description

[ArcPolicy](#) class to parse and operate Arc specific <Policy> node.

#### 5.10.2 Constructor & Destructor Documentation

##### 5.10.2.1 ArcSec::ArcPolicy::ArcPolicy (void)

Constructor

##### 5.10.2.2 ArcSec::ArcPolicy::ArcPolicy (const Arc::XMLNode node)

Constructor

##### 5.10.2.3 ArcSec::ArcPolicy::ArcPolicy (const Arc::XMLNode node, EvaluatorContext \* ctx)

Constructor

### 5.10.3 Member Function Documentation

#### 5.10.3.1 `virtual void ArcSec::ArcPolicy::make_policy ()` [virtual]

Parse XMLNode, and construct the low-level Rule object

The documentation for this class was generated from the following file:

- ArcPolicy.h

## 5.11 ArcSec::ArcRequestItem Class Reference

Container, <Subjects, Actions, Objects, Contexts> tuple.

```
#include <ArcRequestItem.h>
```

### Public Member Functions

- **ArcRequestItem** (Arc::XMLNode &node, AttributeFactory \*attrfactory)
- virtual SubList **getSubjects** () const
- virtual void **setSubjects** (const SubList &sl)
- virtual ResList **getResources** () const
- virtual void **setResources** (const ResList &rl)
- virtual ActList **getActions** () const
- virtual void **setActions** (const ActList &actions)
- virtual CtxList **getContexts** () const
- virtual void **setContexts** (const CtxList &ctx)

### 5.11.1 Detailed Description

Container, <Subjects, Actions, Objects, Contexts> tuple.

Specified [ArcRequestItem](#) which can parse Arc request formate

The documentation for this class was generated from the following file:

- ArcRequestItem.h

## 5.12 ArcSec::ArcRule Class Reference

[ArcRule](#) class to parse Arc specific <Rule> node.

```
#include <ArcRule.h>
```

### Public Member Functions

- **ArcRule** (const Arc::XMLNode node, EvaluatorContext \*ctx)
- virtual std::string **getEffect** () const
- virtual Result **eval** (EvaluationCtx \*ctx)
- virtual MatchResult **match** (EvaluationCtx \*ctx)
- virtual **operator bool** (void) const
- virtual EvalResult & **getEvalResult** ()
- virtual void **setEvalResult** (EvalResult &res)
- const char \* **getEvalName** () const
- const char \* **getName** () const

### Static Protected Attributes

- static Arc::Logger **logger**

#### 5.12.1 Detailed Description

[ArcRule](#) class to parse Arc specific <Rule> node.

The documentation for this class was generated from the following file:

- ArcRule.h

## 5.13 ArcSec::CountPDP Class Reference

[CountPDP](#) - PDP which can handle the Arc specific request and policy schema.

```
#include <CountPDP.h>
```

### Public Member Functions

- **CountPDP** (Arc::Config \*cfg)
- virtual bool **isPermitted** (Arc::Message \*msg)

### Static Public Member Functions

- static Arc::Plugin \* **get\_count\_pdp** (Arc::PluginArgument \*arg)

### Static Protected Attributes

- static Arc::Logger **logger**

#### 5.13.1 Detailed Description

[CountPDP](#) - PDP which can handle the Arc specific request and policy schema.

The documentation for this class was generated from the following file:

- CountPDP.h

## 5.14 ArcSec::DelegationPDP Class Reference

```
#include <DelegationPDP.h>
```

### Public Member Functions

- **DelegationPDP** (Arc::Config \*cfg)
- virtual bool **isPermitted** (Arc::Message \*msg)

### Static Public Member Functions

- static Arc::Plugin \* **get\_delegation\_pdp** (Arc::PluginArgument \*arg)

### Static Protected Attributes

- static Arc::Logger **logger**

#### 5.14.1 Detailed Description

DeleagtionPDP - PDP which can handle the Arc specific request and policy provided as identity delegation policy.

The documentation for this class was generated from the following file:

- DelegationPDP.h

## 5.15 ArcSec::DenyPDP Class Reference

This PDP always returns false (deny).

```
#include <DenyPDP.h>
```

### Public Member Functions

- **DenyPDP** (Arc::Config \*cfg)
- virtual bool **isPermitted** (Arc::Message \*msg)

### Static Public Member Functions

- static Arc::Plugin \* **get\_deny\_pdp** (Arc::PluginArgument \*arg)

#### 5.15.1 Detailed Description

This PDP always returns false (deny).

The documentation for this class was generated from the following file:

- DenyPDP.h

## 5.16 Arc::LDAPQuery Class Reference

```
#include <LDAPQuery.h>
```

### Public Member Functions

- [LDAPQuery](#) (const std::string &ldaphost, int ldapport, bool anonymous=true, const std::string &usersn="", int timeout=TIMEOUT)
- [~LDAPQuery](#) ()
- bool [Query](#) (const std::string &base, const std::string &filter="(objectclass=\*)", const std::list< std::string > &attributes=std::list< std::string >(), URL::Scope scope=URL::subtree)
- bool [Result](#) (ldap\_callback callback, void \*ref)

### Friends

- int [my\\_sasl\\_interact](#) (ldap \*, unsigned int, void \*, void \*)

### 5.16.1 Detailed Description

[LDAPQuery](#) class; querying of LDAP servers.

### 5.16.2 Constructor & Destructor Documentation

#### 5.16.2.1 Arc::LDAPQuery::LDAPQuery (const std::string & ldaphost, int ldapport, bool anonymous = true, const std::string & usersn = "", int timeout = TIMEOUT)

Constructs a new [LDAPQuery](#) object and sets connection options. The connection is first established when calling [Query](#).

#### 5.16.2.2 Arc::LDAPQuery::~~LDAPQuery ()

Destructor. Will disconnect from the ldapserver if still connected.

### 5.16.3 Member Function Documentation

#### 5.16.3.1 bool Arc::LDAPQuery::Query (const std::string & base, const std::string & filter = "(objectclass=\*)", const std::list< std::string > & attributes = std::list< std::string >(), URL::Scope scope = URL::subtree)

Queries the ldap server.

#### 5.16.3.2 bool Arc::LDAPQuery::Result (ldap\_callback callback, void \* ref)

Retrieves the result of the query from the ldap-server.

The documentation for this class was generated from the following file:

- [LDAPQuery.h](#)

## 5.17 Arc::MCC\_HTTP Class Reference

A base class for HTTP client and service MCCs.

```
#include <MCCHTTP.h>
```

Inheritance diagram for Arc::MCC\_HTTP::

### Public Member Functions

- **MCC\_HTTP** (Arc::Config \*cfg)

### Static Protected Attributes

- static Arc::Logger **logger**

#### 5.17.1 Detailed Description

A base class for HTTP client and service MCCs.

This is a base class for HTTP client and service MCCs. It provides some common functionality for them, i.e. so far only a logger.

The documentation for this class was generated from the following file:

- MCCHTTP.h

## 5.18 Arc::MCC\_HTTP\_Client Class Reference

```
#include <MCCHTTP.h>
```

Inheritance diagram for Arc::MCC\_HTTP\_Client::

### Public Member Functions

- **MCC\_HTTP\_Client** (Arc::Config \*cfg)
- virtual MCC\_Status **process** (Message &, Message &)

### Protected Attributes

- std::string **method\_**
- std::string **endpoint\_**

#### 5.18.1 Detailed Description

This class is a client part of HTTP MCC. It accepts PayloadRawInterface payload and uses it as body to generate HTTP request. Request is passed to next MCC as PayloadRawInterface type of payload. Returned PayloadStreamInterface payload is parsed into HTTP response and it's body is passed back to calling MCC as PayloadRawInterface. Attributes of request/input message of type HTTP:name are translated into HTTP header with corresponding 'name's. Special attributes HTTP:METHORD and HTTP:ENDPOINT specify method and URL in HTTP request. If not present meathod and URL are taken from configuration. In output/response message following attributes are present: HTTP:CODE - response code of HTTP HTTP:REASON - reason string of HTTP response HTTP:name - all 'name' attributes of HTTP header.

The documentation for this class was generated from the following file:

- MCCHTTP.h

## 5.19 Arc::MCC\_HTTP\_Service Class Reference

```
#include <MCCHTTP.h>
```

Inheritance diagram for Arc::MCC\_HTTP\_Service::

### Public Member Functions

- **MCC\_HTTP\_Service** (Arc::Config \*cfg)
- virtual MCC\_Status **process** (Message &, Message &)

#### 5.19.1 Detailed Description

This class implements MCC to processes HTTP request. On input payload with PayloadStreamInterface is expected. HTTP message is read from stream and its body is converted into PayloadRaw and passed to next MCC. Returned payload of PayloadRawInterface type is treated as body part of returning [Payload-HTTP](#). Generated HTTP response is sent through stream passed in input payload. During processing of request/input message following attributes are generated: HTTP:METHORD - HTTP method e.g. GET, PUT, POST, etc. HTTP:ENDPOINT - URL taken from HTTP request ENDPOINT - global attribute equal to HTTP:ENDPOINT HTTP:RANGESTART - start of requested byte range HTTP:RANGEEND - end of requested byte range (inclusive) HTTP:name - all 'name' attributes of HTTP header. Attributes of response message of HTTP:name type are translated into HTTP header with corresponding 'name's.

The documentation for this class was generated from the following file:

- MCCHTTP.h

## 5.20 Arc::MCC\_SOAP Class Reference

A base class for SOAP client and service MCCs.

```
#include <MCCSOAP.h>
```

Inheritance diagram for Arc::MCC\_SOAP::

### Public Member Functions

- **MCC\_SOAP** (Arc::Config \*cfg)

### Static Protected Attributes

- static Arc::Logger **logger**

#### 5.20.1 Detailed Description

A base class for SOAP client and service MCCs.

This is a base class for SOAP client and service MCCs. It provides some common functionality for them, i.e. so far only a logger.

The documentation for this class was generated from the following file:

- MCCSOAP.h

## 5.21 Arc::MCC\_SOAP\_Service Class Reference

```
#include <MCCSOAP.h>
```

Inheritance diagram for Arc::MCC\_SOAP\_Service::

### Public Member Functions

- **MCC\_SOAP\_Service** (Arc::Config \*cfg)
- virtual MCC\_Status **process** (Message &, Message &)

#### 5.21.1 Detailed Description

This MCC parses SOAP message from input payload. On input payload with PayloadRawInterface is expected. It's converted into PayloadSOAP and passed next MCC. Returned PayloadSOAP is converted into PayloadRaw and returned to calling MCC.

The documentation for this class was generated from the following file:

- MCCSOAP.h

## 5.22 Arc::MCC\_TCP Class Reference

A base class for TCP client and service MCCs.

```
#include <MCCTCP.h>
```

Inheritance diagram for Arc::MCC\_TCP::

### Public Member Functions

- `MCC_TCP` (`Arc::Config *cfg`)

### Static Protected Attributes

- static `Arc::Logger` **logger**

### Friends

- class `PayloadTCPSocket`

#### 5.22.1 Detailed Description

A base class for TCP client and service MCCs.

This is a base class for TCP client and service MCCs. It provides some common functionality for them, i.e. so far only a logger.

The documentation for this class was generated from the following file:

- `MCCTCP.h`

## 5.23 Arc::MCC\_TCP\_Client Class Reference

```
#include <MCCTCP.h>
```

Inheritance diagram for Arc::MCC\_TCP\_Client::

### Public Member Functions

- **MCC\_TCP\_Client** (Arc::Config \*cfg)
- virtual MCC\_Status **process** (Message &, Message &)

#### 5.23.1 Detailed Description

This class is MCC implementing TCP client. Upon creation it connects to specified TCP port at specified host. process() method accepts PayloadRawInterface type of payload. Content of payload is sent over TCP socket. It returns PayloadStreamInterface payload for previous MCC to read response.

The documentation for this class was generated from the following file:

- MCCTCP.h

## 5.24 Arc::MCC\_TCP\_Service Class Reference

```
#include <MCCTCP.h>
```

Inheritance diagram for Arc::MCC\_TCP\_Service::

### Public Member Functions

- [MCC\\_TCP\\_Service](#) (Arc::Config \*cfg)
- virtual MCC\_Status **process** (Message &, Message &)

### Friends

- class `mcc_tcp_exec_t`

### Classes

- class `mcc_tcp_exec_t`

#### 5.24.1 Detailed Description

This class is MCC implementing TCP server. Upon creation this object binds to specified TCP ports and listens for incoming TCP connections on dedicated thread. Each connection is accepted and dedicated thread is created. Then that thread is used to call process() method of next MCC in chain. That method is passed payload implementing PayloadStreamInterface. On response payload with PayloadRawInterface is expected. Alternatively called MCC may use provided PayloadStreamInterface to send it's response back directly. During processing of request this MCC generates following attributes: TCP:HOST - IP address of interface to which local TCP socket is bound TCP:PORT - port number to which local TCP socket is bound TCP:REMOTEHOST - IP address from which connection is accepted TCP:REMOTEPORT - TCP port from which connection is accepted TCP:ENDPOINT - URL-like representation of remote connection - `://HOST:PORT` ENDPOINT - global attribute equal to TCP:ENDPOINT

#### 5.24.2 Constructor & Destructor Documentation

##### 5.24.2.1 Arc::MCC\_TCP\_Service::MCC\_TCP\_Service (Arc::Config \* *cfg*)

executing function for connection thread

The documentation for this class was generated from the following file:

- MCCTCP.h

## 5.25 Arc::MCC\_TLS Class Reference

A base class for TLS client and service MCCs.

```
#include <MCCTLS.h>
```

Inheritance diagram for Arc::MCC\_TLS::

### Public Member Functions

- **MCC\_TLS** (Arc::Config &cfg, bool client)

### Protected Member Functions

- bool **do\_ssl\_init** (void)
- void **do\_ssl\_deinit** (void)

### Static Protected Member Functions

- static void **ssl\_locking\_cb** (int mode, int n, const char \*file, int line)
- static unsigned long **ssl\_id\_cb** (void)

### Protected Attributes

- ConfigTLMCC **config\_**

### Static Protected Attributes

- static unsigned int **ssl\_initialized\_**
- static Glib::Mutex **lock\_**
- static Glib::Mutex \* **ssl\_locks\_**
- static int **ssl\_locks\_num\_**
- static Logger **logger**

#### 5.25.1 Detailed Description

A base class for TLS client and service MCCs.

This is a base class for TLS client and service MCCs. It provides some common functionality for them.

The documentation for this class was generated from the following file:

- MCCTLS.h

## 5.26 Arc::MCC\_TLS\_Client Class Reference

```
#include <MCCTLS.h>
```

Inheritance diagram for Arc::MCC\_TLS\_Client::

### Public Member Functions

- **MCC\_TLS\_Client** (Arc::Config &cfg)
- virtual MCC\_Status **process** (Message &, Message &)
- virtual void **Next** (MCCInterface \*next, const std::string &label="")

### 5.26.1 Detailed Description

This class is MCC implementing TLS client.

The documentation for this class was generated from the following file:

- MCCTLS.h

## 5.27 Arc::MCC\_TLS\_Service Class Reference

```
#include <MCCTLS.h>
```

Inheritance diagram for Arc::MCC\_TLS\_Service::

### Public Member Functions

- **MCC\_TLS\_Service** (Arc::Config &cfg)
- virtual MCC\_Status **process** (Message &, Message &)

#### 5.27.1 Detailed Description

This MCC implements TLS server side functionality. Upon creation this object creates SSL\_CTX object and configures SSL\_CTX object with some environment information about credential. Because we cannot know the "socket" when the creation of MCC\_TLS\_Service/MCC\_TLS\_Client object (not like [MCC\\_TCP\\_Client](#), which can creat socket in the constructor method by using information in configuration file), we can only creat "ssl" object which is binded to specified "socket", when [MCC\\_HTTP\\_Client](#) calls the process() method of [MCC\\_TLS\\_Client](#) object, or [MCC\\_TCP\\_Service](#) calls the process() method of [MCC\\_TLS\\_Service](#) object. The "ssl" object is embeded in a payload called PayloadTLSSocket.

The process() method of [MCC\\_TLS\\_Service](#) is passed payload implementing PayloadStreamInterface and the method returns empty PayloadRaw payload in "outmsg". The ssl object is created and bound to Stream payload when constructing the PayloadTLSSocket in the process() method.

During processing of message this MCC generates attribute TLS:PEERDN which contains Distinguished Name of remote peer.

The documentation for this class was generated from the following file:

- MCCTLS.h

## 5.28 Arc::PayloadHTTP Class Reference

```
#include <PayloadHTTP.h>
```

### Public Member Functions

### 5.28.1 Detailed Description

This class implements parsing and generation of HTTP messages. It implements only subset of HTTP/1.1 and also provides an PayloadRawInterface for including as payload into Message passed through MCC chains.

### 5.28.2 Constructor & Destructor Documentation

#### 5.28.2.1 Arc::PayloadHTTP::PayloadHTTP (PayloadStreamInterface & *stream*, bool *own* = false)

Constructor - creates object by parsing HTTP request or response from stream. Supplied stream is associated with object for later use. If own is set to true then stream will be deleted in destructor. Because stream can be used by this object during whole lifetime it is important not to destroy stream till this object is deleted.

#### 5.28.2.2 Arc::PayloadHTTP::PayloadHTTP (const std::string & *method*, const std::string & *url*, PayloadStreamInterface & *stream*)

Constructor - creates HTTP request to be sent through stream. HTTP message is not sent yet.

#### 5.28.2.3 Arc::PayloadHTTP::PayloadHTTP (const std::string & *method*, const std::string & *url*)

Constructor - creates HTTP request to be rendered through Raw interface.

**5.28.2.4 Arc::PayloadHTTP::PayloadHTTP (int *code*, const std::string & *reason*, PayloadStreamInterface & *stream*)**

Constructor - creates HTTP response to be sent through stream. HTTP message is not sent yet.

**5.28.2.5 Arc::PayloadHTTP::PayloadHTTP (int *code*, const std::string & *reason*)**

Constructor - creates HTTP response to be rendered through Raw interface.

**5.28.3 Member Function Documentation****5.28.3.1 virtual void Arc::PayloadHTTP::Attribute (const std::string & *name*, const std::string & *value*) [virtual]**

Sets HTTP header attribute 'name' to 'value'

**5.28.3.2 virtual const std::string& Arc::PayloadHTTP::Attribute (const std::string & *name*) [virtual]**

Returns HTTP header attribute with specified name. Empty string if no such attribute.

**5.28.3.3 virtual const std::map<std::string, std::string>& Arc::PayloadHTTP::Attributes (void) [virtual]**

Returns all HTTP header attributes.

**5.28.3.4 virtual void Arc::PayloadHTTP::Body (PayloadRawInterface & *body*, bool *ownership* = true) [virtual]**

Assign HTTP body. Assigned object is not copied. Instead it is remembered and made available through Raw interface. If 'ownership' is true then passed object is treated as being owned by this instance and destroyed in destructor.

**5.28.3.5 virtual bool Arc::PayloadHTTP::Flush (void) [virtual]**

Send created object through associated stream. If there is no stream associated then HTTP specific data is inserted into Raw buffers of this object. In last case this operation should not be repeated till content of buffer is completely rewritten.

**5.28.3.6 bool Arc::PayloadHTTP::get\_body (void) [protected]**

Read Body of HTTP message and attach it to inherited PayloadRaw object

**5.28.3.7 bool Arc::PayloadHTTP::parse\_header (void) [protected]**

Read HTTP header and fill internal variables

**5.28.3.8** `bool Arc::PayloadHTTP::read (char * buf, int & size)` [protected]

Read up to 'size' bytes from stream\_

**5.28.3.9** `bool Arc::PayloadHTTP::readline (std::string & line)` [protected]

Read from stream till

## 5.28.4 Member Data Documentation

**5.28.4.1** `std::map<std::string,std::string> Arc::PayloadHTTP::attributes_` [protected]

true if conection should not be closed after response

**5.28.4.2** `PayloadRawInterface* Arc::PayloadHTTP::body_` [protected]

if true stream\_ is owned by this

**5.28.4.3** `bool Arc::PayloadHTTP::body_own_` [protected]

associated HTTP Body if any (to avoid copying to own buffer)

**5.28.4.4** `bool Arc::PayloadHTTP::chunked_` [protected]

Content-length of HTTP message

**5.28.4.5** `int Arc::PayloadHTTP::code_` [protected]

HTTP method being used or requested

**5.28.4.6** `bool Arc::PayloadHTTP::keep_alive_` [protected]

true if content is chunked

**5.28.4.7** `int Arc::PayloadHTTP::length_` [protected]

HTTP reason being sent or supplied

**5.28.4.8** `std::string Arc::PayloadHTTP::method_` [protected]

minor number of HTTP version - must be 0 or 1

**5.28.4.9** `std::string Arc::PayloadHTTP::reason_` [protected]

HTTP code being sent or supplied

**5.28.4.10** PayloadStreamInterface\* [Arc::PayloadHTTP::stream\\_](#) [protected]

true if whole content of HTTP body was fetched and stored in buffers. Otherwise only header was fetched and part of body in tbuf\_ and rest is to be read through stream\_.

**5.28.4.11** bool [Arc::PayloadHTTP::stream\\_own\\_](#) [protected]

stream used to communicate to outside

**5.28.4.12** std::string [Arc::PayloadHTTP::uri\\_](#) [protected]

if true body\_ is owned by this

**5.28.4.13** int [Arc::PayloadHTTP::version\\_major\\_](#) [protected]

URI being contacted

**5.28.4.14** int [Arc::PayloadHTTP::version\\_minor\\_](#) [protected]

major number of HTTP version - must be 1

The documentation for this class was generated from the following file:

- PayloadHTTP.h

## 5.29 Arc::PayloadTCPSocket Class Reference

```
#include <PayloadTCPSocket.h>
```

### Public Member Functions

- [PayloadTCPSocket](#) (const char \*hostname, int port, Logger &logger)
- [PayloadTCPSocket](#) (const std::string endpoint, Logger &logger)
- [PayloadTCPSocket](#) (int s, Logger &logger)
- [PayloadTCPSocket](#) ([PayloadTCPSocket](#) &s)
- [PayloadTCPSocket](#) (PayloadStream &s, Logger &logger)
- virtual bool **Get** (char \*buf, int &size)
- virtual bool **Put** (const char \*buf, int size)

### 5.29.1 Detailed Description

This class extends PayloadStream with TCP socket specific features

### 5.29.2 Constructor & Destructor Documentation

#### 5.29.2.1 Arc::PayloadTCPSocket::PayloadTCPSocket (const char \* *hostname*, int *port*, Logger & *logger*)

Constructor - connects to TCP server at specified hostname:port

#### 5.29.2.2 Arc::PayloadTCPSocket::PayloadTCPSocket (const std::string *endpoint*, Logger & *logger*)

Constructor - connects to TCP server at specified endpoint - hostname:port

#### 5.29.2.3 Arc::PayloadTCPSocket::PayloadTCPSocket (int *s*, Logger & *logger*) [inline]

Constructor - creates object of already connected socket. Socket is NOT closed in destructor.

#### 5.29.2.4 Arc::PayloadTCPSocket::PayloadTCPSocket ([PayloadTCPSocket](#) & *s*) [inline]

Copy constructor - inherits socket of copied object. Socket is NOT closed in destructor.

#### 5.29.2.5 Arc::PayloadTCPSocket::PayloadTCPSocket (PayloadStream & *s*, Logger & *logger*) [inline]

Copy constructor - inherits handle of copied object. Handle is NOT closed in destructor.

The documentation for this class was generated from the following file:

- PayloadTCPSocket.h

## 5.30 Arc::PayloadTLSStream Class Reference

```
#include <PayloadTLSStream.h>
```

### Public Member Functions

### Static Public Member Functions

- static void **HandleError** (Logger &logger, int code=SSL\_ERROR\_NONE)
- static void **ClearError** (void)

### Protected Attributes

- int **timeout\_**
- SSL \* **ssl\_**
- Logger & **logger\_**

#### 5.30.1 Detailed Description

Implemetation of PayloadStreamInterface for SSL handle.

#### 5.30.2 Constructor & Destructor Documentation

##### 5.30.2.1 Arc::PayloadTLSStream::PayloadTLSStream (Logger & *logger*, SSL \* *ssl* = NULL)

Constructor. Attaches to already open handle. Handle is not managed by this class and must be closed by external code.

### 5.30.2.2 virtual Arc::PayloadTLSStream::~~PayloadTLSStream (void) [virtual]

Destructor.

## 5.30.3 Member Function Documentation

### 5.30.3.1 X509\* Arc::PayloadTLSStream::GetCert (void)

Get local certificate from associated ssl. Obtained X509 object is owned by this instance and becomes invalid after destruction.

### 5.30.3.2 X509\* Arc::PayloadTLSStream::GetPeerCert (void)

Get peer certificate from the established ssl. Obtained X509 object is owned by this instance and becomes invalid after destruction. Still obtained has to be freed at end of usage.

### 5.30.3.3 Arc::PayloadTLSStream::STACK\_OF (X509)

Get chain of peer certificates from the established ssl. Obtained X509 object is owned by this instance and becomes invalid after destruction.

## 5.30.4 Member Data Documentation

### 5.30.4.1 SSL\* Arc::PayloadTLSStream::ssl\_ [protected]

Timeout for read/write operations

The documentation for this class was generated from the following file:

- PayloadTLSStream.h

## 5.31 ArcSec::SAML2SSO\_AssertionConsumerSH Class Reference

Implement the functionality of the Service Provider in SAML2 SSO profile.

```
#include <SAML2SSO_AssertionConsumerSH.h>
```

### Public Member Functions

- **SAML2SSO\_AssertionConsumerSH** (Arc::Config \*cfg, Arc::ChainContext \*ctx)
- virtual bool **Handle** (Arc::Message \*msg)

### Static Public Member Functions

- static Arc::Plugin \* **get\_sechandler** (Arc::PluginArgument \*arg)

#### 5.31.1 Detailed Description

Implement the functionality of the Service Provider in SAML2 SSO profile.

The documentation for this class was generated from the following file:

- SAML2SSO\_AssertionConsumerSH.h

## 5.32 ArcSec::SimpleListPDP Class Reference

Tests X509 subject against list of subjects in file.

```
#include <SimpleListPDP.h>
```

### Public Member Functions

- **SimpleListPDP** (Arc::Config \*cfg)
- virtual bool **isPermitted** (Arc::Message \*msg)

### Static Public Member Functions

- static Arc::Plugin \* **get\_simplelist\_pdp** (Arc::PluginArgument \*arg)

### Static Protected Attributes

- static Arc::Logger **logger**

#### 5.32.1 Detailed Description

Tests X509 subject against list of subjects in file.

This class implements PDP interface. It's isPermitted() method compares X590 subject of requestor obtained from TLS layer (TLS:PEERDN) to list of subjects (ne per line) in external file. Locations of file is defined by 'location' attribute of PDP caonfiguration. Returns true if subject is present in list, otherwise false.

The documentation for this class was generated from the following file:

- SimpleListPDP.h

### 5.33.1 Detailed Description

A client interface to the SRM protocol. Instances of SRM clients are created by calling the [getInstance\(\)](#) factory method. One client instance can be used to make many requests to the same server (with the same protocol version), but not multiple servers.

### 5.33.2 Constructor & Destructor Documentation

#### 5.33.2.1 virtual SRMClient::~SRMClient () [inline, virtual]

empty destructor

### 5.33.3 Member Function Documentation

#### 5.33.3.1 virtual bool SRMClient::abort (SRMClientRequest & req) [pure virtual]

Called in the case of failure during transfer or releasePut. Releases all TURLs involved in the transfer.

##### Parameters:

*req* The request object

##### Returns:

True on success, false on failure

#### 5.33.3.2 bool SRMClient::connect (void) [inline]

Establish a connection to the service

#### 5.33.3.3 virtual bool SRMClient::copy (SRMClientRequest & req, const std::string & source) [pure virtual]

Copy a file between two SRM storages.

##### Parameters:

*req* The request object

*source* The source SURL

##### Returns:

True on success, false on failure

#### 5.33.3.4 bool SRMClient::disconnect (void) [inline]

Disconnect from the service and destroy the connection

**5.33.3.5** static [SRMClient](#)\* SRMClient::getInstance (std::string url, time\_t timeout = 300, SRMVersion srm\_version = SRM\_VNULL) [static]

Returns an [SRMClient](#) instance with the required protocol version. This must be used to create [SRMClient](#) instances. Specifying a version explicitly forces creation of a client with that version.

**Parameters:**

*url* A SURL. A client connects to the service host derived from this SURL. All operations with a client instance must use SURLs with the same host as this one.

*version* If this is non-NULL a client instance of this version is returned.

**5.33.3.6** virtual SRMReturnCode SRMClient::getRequestTokens (std::list< std::string > & tokens, std::string description = "") [pure virtual]

Returns a list of request tokens for the user calling the method which are still active requests, or the tokens corresponding to the token description, if given.

**Parameters:**

*tokens* The list filled by the service

*description* The user request description, which can be specified when the request is created

**Returns:**

True on success, false on failure

**5.33.3.7** virtual SRMReturnCode SRMClient::getSpaceTokens (std::list< std::string > & tokens, std::string description = "") [pure virtual]

Find the space tokens available to write to which correspond to the space token description, if given. The list of tokens is a list of numbers referring to the SRM internal definition of the spaces, not user-readable strings.

**Parameters:**

*tokens* The list filled by the service

*description* The space token description

**Returns:**

True on success, false on failure

**5.33.3.8** virtual bool SRMClient::getURLs ([SRMClientRequest](#) & req, std::list< std::string > & urls) [pure virtual]

If the user wishes to copy a file from somewhere, [getURLs\(\)](#) is called to retrieve the transport URL to copy the file from.

**Parameters:**

*req* The request object

*urls* A list of TURLs filled by the method

#### Returns:

True on success, false on failure

#### 5.33.3.9 `std::string SRMClient::getVersion ()` [inline]

Returns the version of the SRM protocol used by this instance

#### 5.33.3.10 `virtual bool SRMClient::info (SRMClientRequest & req, std::list< struct SRMFileMetaData > & metadata, const int recursive = 0)` [pure virtual]

Returns information on a file or files (v2.2 and higher) stored in an SRM, such as file size, checksum and estimated access latency.

#### Parameters:

*req* The request object  
*metadata* A list of structs filled with file information  
*recursive* The level of recursion into sub directories

#### Returns:

True on success, false on failure

#### See also:

[SRMFileMetaData](#)

#### 5.33.3.11 `virtual SRMReturnCode SRMClient::ping (std::string & version, bool report_error = true)` [pure virtual]

Find out the version supported by the server this client is connected to. Since this method is used to determine which client version to instantiate, we may not want to report an error to the user, so setting `report_error` to false suppresses the error message.

#### Parameters:

*version* The version returned by the server  
*report\_error* Whether an error should be reported

#### Returns:

SRMReturnCode specifying outcome of operation

#### 5.33.3.12 `virtual bool SRMClient::putTURLs (SRMClientRequest & req, std::list< std::string > & urls, unsigned long long size = 0)` [pure virtual]

If the user wishes to copy a file to somewhere, `putTURLs()` is called to retrieve the transport URL to copy the file to.

**Parameters:**

*req* The request object  
*urls* A list of TURLs filled by the method  
*size* The size of the file

**Returns:**

True on success, false on failure

**5.33.3.13 virtual bool SRMClient::release (SRMClientRequest & req) [pure virtual]**

Used in SRM v1 only. Called to release files after successful transfer.

**Parameters:**

*req* The request object

**Returns:**

True on success, false on failure

**5.33.3.14 virtual bool SRMClient::releaseGet (SRMClientRequest & req) [pure virtual]**

Should be called after a successful copy from SRM storage.

**Parameters:**

*req* The request object

**Returns:**

True on success, false on failure

**5.33.3.15 virtual bool SRMClient::releasePut (SRMClientRequest & req) [pure virtual]**

Should be called after a successful copy to SRM storage.

**Parameters:**

*req* The request object

**Returns:**

True on success, false on failure

**5.33.3.16 virtual bool SRMClient::remove (SRMClientRequest & req) [pure virtual]**

Delete a file physically from storage and the SRM namespace.

**Parameters:**

*req* The request object

**Returns:**

True on success, false on failure

**5.33.3.17 virtual SRMReturnCode SRMClient::requestBringOnline (SRMClientRequest & req)**  
[pure virtual]

Submit a request to bring online files. This operation is asynchronous and the status of the request can be checked by calling [requestBringOnlineStatus\(\)](#) with the request token in req which is assigned by this method.

**Parameters:**

*req* The request object

**Returns:**

SRMReturnCode specifying outcome of operation

**5.33.3.18 virtual SRMReturnCode SRMClient::requestBringOnlineStatus (SRMClientRequest & req)** [pure virtual]

Query the status of a request to bring files online. The SURIs map is updated if the status of any files in the request has changed.

**Parameters:**

*req* The request object to query the status of

**Returns:**

SRMReturnCode specifying outcome of operation

**5.33.3.19 void SRMClient::Timeout (int t)** [inline]

set the request timeout

**5.33.4 Member Data Documentation****5.33.4.1 Arc::HTTPSCientSOAP\* SRMClient::csoap** [protected]

SOAP client object

**5.33.4.2 SRMImplementation SRMClient::implementation** [protected]

The implementation of the server

**5.33.4.3 Arc::Logger SRMClient::logger** [static, protected]

Logger

**5.33.4.4** `time_t SRMClient::request_timeout` [static, protected]

Timeout for requests to the SRM service

**5.33.4.5** `std::string SRMClient::service_endpoint` [protected]

The URL of the service endpoint, eg `http://srm.ndgf.org:8443/srm/managerv2` All URLs passed to methods must correspond to this endpoint.

**5.33.4.6** `std::string SRMClient::version` [protected]

The version of the SRM protocol used

The documentation for this class was generated from the following file:

- `SRMClient.h`

## 5.34 SRMClientRequest Class Reference

```
#include <SRMClient.h>
```

### Public Member Functions

### 5.34.1 Detailed Description

Class to represent a request which may be used for multiple operations, for example calling getTURLs() sets the request token in the request object (for a v2.2 client) and then same object is passed to releaseGet().

### 5.34.2 Constructor & Destructor Documentation

#### 5.34.2.1 SRMClientRequest::SRMClientRequest (std::list< std::string > urls) throw (SRMInvalidRequestException) [inline]

Creates a request object with multiple SURLs. The URLs here are in the form srm://srm.ndgf.org/pnfs/ndgf.org/data/atlas/disk/user/user.mlassnig.dataset.1/dummyfile3

#### 5.34.2.2 SRMClientRequest::SRMClientRequest (std::string url = "", std::string id = "") throw (SRMInvalidRequestException) [inline]

Creates a request object with a single SURL. The URL here are in the form srm://srm.ndgf.org/pnfs/ndgf.org/data/atlas/disk/user/user.mlassnig.dataset.1/dummyfile3

### 5.34.3 Member Function Documentation

**5.34.3.1** `void SRMClientRequest::file_ids (std::list< int > ids)` [inline]

set and get file id list

**5.34.3.2** `void SRMClientRequest::finished_success ()` [inline]

set and get status of request

**5.34.3.3** `void SRMClientRequest::request_id (int id)` [inline]

set and get request id

**5.34.3.4** `void SRMClientRequest::request_token (char * token)` [inline]

set and get request token

**5.34.3.5** `void SRMClientRequest::space_token (std::string token)` [inline]

set and get space token

**5.34.3.6** `void SRMClientRequest::surl_failures (std::string surl, std::string reason)` [inline]

set and get surl failures

**5.34.3.7** `void SRMClientRequest::surl_statuses (std::string surl, SRMFileLocality locality)`  
[inline]

set and get surl statuses

**5.34.3.8** `std::list<std::string> SRMClientRequest::surls ()` [inline]

get URLs

**5.34.3.9** `void SRMClientRequest::waiting_time (int wait_time)` [inline]

set and get waiting time
