1 Introduction

This document contains information about how XRSL, JDL and the various supported JSDL flavours are mapped to and from the job description internal representation in ARC-lib.

2 Data Structure

The internal representation of the job description is contained in the JobDescription class, which consist of the following objects: JobIdentification, Application, Resources, DataStaging and JobMetaData. JobIdentification contains data used to identify the job description through various types, tags and names. The Application object is used to describe explicitly the executable which should be executed at the Computing Endpoint (CE), environment variables, logging, standard in and out, credential service, etc. The Resources class contains information about requirements and the type of execution node preferred by the user. The DataStaging class contains information about input files and output files/directories created by the job. Finally the job description may contain meta data, describing the context in which the description was generated, and it is stored in the JobMetaData class.

2.1 JobIdentification

2.1.1 JobName

	In	Out
XRSL	jobname	jobname
JDL	No matching attribute	Not mapped
JSDL	JobIdentification/JobName	JobIdentification/JobName
ARC-JSDL		

2.1.2 Description

	In	Out
ARC-JSDL	JobIdentification/Description	JobIdentification/Description

2.1.3 JobType

	In	Out
ARC-JSDL	JobIdentification/JobType	JobIdentification/JobType

JDL has a jobtype and a type attribute, however a mapping has not been made.

2.1.4 UserTag

	In	Out
JDL	usertags	usertags
ARC-JSDL	JobIdentification/UserTag	JobIdentification/UserTag

2.2 JobVOName

	In	Out
XRSL	jobname	jobname
ARC-JSDL	JobIdentification/JobVOName	JobIdentification/JobVOName

2.3 Application

2.3.1 Executable

	In	Out
XRSL	executable, arguments	executable, arguments
JDL	Executable, Arguments	Executable, Arguments
Posix-JSDL	Application/POSIXApplication/Executable, Application/POSIXApplication/Arguments	Application/POSIXApplication/Executable, Application/POSIXApplication/Arguments
HPCP-JSDL	Application/HPCProfileApplication/Executable, Application/HPCProfileApplication/Arguments	Application/HPCProfileApplication/Executable, Application/HPCProfileApplication/Arguments
ARC-JSDL	Application/Executable/Path, Application/Executable/Argument	Application/Executable/Path, Application/Executable/Argument

The Executable data member is a composite structure of a string and a list of strings, where the string holds the executable and the list holding the arguments.

2.3.2 Input

	In	Out
XRSL	stdin	stdin, inputFiles
JDL	StdInput	StdInput, InputSandbox
Posix-JSDL	Application/POSIXApplication/Input	Application/POSIXApplication/Input
HPCP-JSDL	Application/HPCProfileApplication/Input	Application/HPCProfileApplication/Input
ARC-JSDL	Application/Input	

If the Input data member does not exist in the file list, it will be added to it.

2.3.3 Output

	In	Out
XRSL	stdout	stdout, outputFiles
JDL	StdOutput	StdOutput, OutputSandbox, OutputSandboxDestURI
Posix-JSDL	Application/POSIXApplication/Output	
HPCP-JSDL	Application/HPCProfileApplication/Output	
ARC-JSDL	Application/Output	

If the Output data member does not exist in the File list, it will be added to it.

2.3.4 Error

	In	Out
XRSL	stderr	stderr, outputFiles
JDL	StdError	StdError, OutputSandbox, OutputSandboxDestURI
Posix-JSDL	Application/POSIXApplication/Error	
HPCP-JSDL	Application/HPCProfileApplication/Error	
ARC-JSDL	Application/Error	

If the Error data member does not exist in the File list, it will be added to it.

2.3.5 Join

	In	Out
XRSL	join	Not mappedTODO
ARC-JSDL	Application/Join	Application/Join

2.3.6 Environment

Name

	In	Out
XRSL	environment*	environment*
JDL	Environment**	Environment**
Posix-JSDL	Application/POSIXApplication/Environment.name	Application/POSIXApplication/Environment.name
HPCP-JSDL	Application/HPCProfileApplication/Environment.name	Application/HPCProfileApplication/Environment.name
ARC-JSDL	Application/Environment/Name	

The XRSL attribute environment is a list of pairs. The first element of each pair is mapped to the Name data member. The JDL attribute Environment is a list of equalities.

Value

	In	Out
XRSL	environment*	environment*
JDL	Environment**	Environment**
JSDL	No matching attribute	Not mapped
Posix-JSDL	Application/POSIXApplication/Environment	Application/POSIXApplication/Environment
HPCP-JSDL	Application/HPCProfileApplication/Environment	Applicaion/HPCProfileApplication/Environment
ARC-JSDL	Application/Environment/Value	

2.3.7 Prologue

	In	Out
JDL	Prologue, PrologueArgument	Prologue, PrologueArgument
ARC-JSDL	Application/Prologue/Path, Application/Prologue/Argument	Application/Prologue/Path, Application/Prologue/Argument

2.3.8 Epilogue

	In	Out
JDL	Epilogue, EpilogueArgument	Epilogue, EpilogueArgument
ARC-JSDL	Application/Epilogue/Path, Application/Epilogue/Argument	Application/Epilogue/Path, Application/Epilogue/Argument

2.3.9 LogDir

	In	Out
XRSL	gmlog	gmlog outputFiles
ARC-JSDL	Application/LogDir	Application/LogDir

2.4 RemoteLogging

	In	Out
XRSL	jobreport	jobreport
ARC-JSDL	Application/RemoteLogging	Application/RemoteLogging

2.4.1 Rerun

	In	Out
XRSL	rerun	rerun
JDL	RetryCount ShallowRetryCount*	RetryCount ShallowRetryCount**
ARC-JSDL	Application/Rerun	Application/Rerun

* Only the maximum value between RetryCount and ShallowRetryCount is stored.

** Both RetryCount and ShallowRetryCount will be set if Rerun is set, and they will both have the value of Rerun.

2.4.2 ExpiryTime

	In	Out
JDL	ExpiryTime	ExpiryTime
ARC-JSDL	Application/ExpiryTime	Application/ExpiryTime

2.4.3 StartOnHold

In	Out
----	-----

2.4.4 ProcessingStartTime

	In	Out
ARC-JSDL	Application/ProcessingStartTime	Application/ProcessingStartTime

2.4.5 Notification

	In	Out
XRSL	notify	notify
ARC-JSDL	Application/Notification	Application/Notification

2.4.6 CredentialService

	In	Out
XRSL	credentialserver	credentialserver
JDL	MyProxyServer	MyProxyServer
ARC-JSDL	Application/CredentialService	Application/CredentialService

2.4.7 AccessControl

	In	Out
XRSL	acl	acl
ARC-JSDL	Application/AccessControl	Application/AccessControl

2.5 Resources

2.5.1 OperatingSystem

	In	Out
XRSL	opsys	opsys
ARC-JSDL	Resources/OperatingSystem	Resources/OperatingSystem

2.5.2 Platform

	In	Out
XRSL	architecture	architecture
JSDL	Resources/CPUArchitecture/CPUArchitectureName	
ARC-JSDL	Resources/Platform	

2.5.3 NetworkInfo

	In	Out
JSDL	Resources/IndividualNetworkBandwidth	
ARC-JSDL	Resources/NetworkInfo	

2.5.4 NodeAccess

	In	Out
XRSL	nodeAccess	nodeAccess
ARC-JSDL	Resources/NodeAccess	

2.5.5 IndividualPhysicalMemory

	In	Out
XRSL	memory	memory
Posix-JSDL	Application/POSIXApplication/MemoryLimit	
ARC-JSDL	Resources/IndividualPhysicalMemory	

2.5.6 IndividualVirtualMemory

	In	Out
Posix-JSDL	Application/POSIXApplication/VirtualMemoryLimit	
ARC-JSDL	Resources/IndividualVirtualMemory	

2.5.7 DiskSpaceRequirement

DiskSpace

	In	Out
XRSL	disk	disk
JSDL	Application/FileSystem/DiskSpace	
ARC-JSDL	Resources/DiskSpaceRequirement/DiskSpace	

CacheDiskSpace

	In	Out
ARC-JSDL	Resources/CacheDiskSpace	Resources/CacheDiskSpace

SessionDiskSpace

	In	Out
ARC-JSDL	Resources/SessionDiskSpace	Resources/SessionDiskSpace

2.5.8 SessionLifetime

	In	Out
XRSL	lifeTime	lifeTime
ARC-JSDL	Resources/SessionLifeTime	Resources/SessionLifeTime

2.5.9 SessionAccessMode

In	Out
----	-----

2.5.10 IndividualCPUTime

	In	Out
JSDL	Resources/IndividualCPUTime*	
ARC-JSDL	Resources/IndividualCPUTime	

* The JSDL element is mapped to the Range part of IndividualCPUTime.

2.5.11 TotalCPUTime

	In	Out
XRSL	cpuTime	cpuTime
JSDL	Resources/TotalCPUTime*	
Posix-JSDL	Application/POSIXApplication/CPUTimeLimit*	
ARC-JSDL	Resources/TotalCPUTime	

* The JSDL and POSIX-JSDL elements is mapped to the Range part of TotalCPUTime.

2.5.12 IndividualWallTime

	In	Out
ARC-JSDL	Resources/IndividualWallTime	

2.5.13 TotalWallTime

	In	Out
XRSL	wallTime	wallTime
Posix-JSDL	Application/POSIXApplication/WallTimeLimit	
ARC-JSDL	Resources/TotalWallTime	

2.5.14 Homogeneous

In	Out
----	-----

2.5.15 Benchmark

Type

In	Out
----	-----

Value

In	Out
----	-----

2.5.16 CEType

	In	Out
XRSL	middleware	middleware
ARC-JSDL	Application/CEType	Application/CEType

2.5.17 SlotRequirement

NumberOfSlots

	In	Out
Posix-JSDL	Application/POSIXApplication/ProcessCountLimit	
ARC-JSDL	Resources/SlotRequirement/NumberOfSlots	

ProcessPerHost

	In	Out
XRSL	count	count
JSDL	Resources/TotalCPUCount	
ARC-JSDL	Resources/SlotRequirement/ProcessPerHost	

ThreadsPerProcesses

	In	Out
Posix-JSDL	Application/POSIXApplication/ThreadCountLimit	
ARC-JSDL	Resources/SlotRequirement/ThreadsPerProcesses	

SPMDVariation

	In	Out
ARC-JSDL	Resources/SlotRequirement/SPMDVariation	

2.5.18 CandidateTarget

EndPointURL

	In	Out
XRSL	cluster	Not mapped
JSDL	Resources/CandidateHosts/HostName	
ARC-JSDL	Resources/CandidateTarget/EndPointURL	Resources/CandidateTarget/EndPointURL

QueueName

	In	Out
XRSL	queue	queue
JDL	QueueName	QueueName
ARC-JSDL	Resources/CandidateTarget/QueueName	Resources/CandidateTarget/QueueName

2.5.19 RunTimeEnvironment

	In	Out
XRSL	runTimeEnvironment	runTimeEnvironment
ARC-JSDL	Application/RunTimeEnvironment	Application/RunTimeEnvironment
