# **Namespace Documentation**

### 5.1 DREService Namespace Reference

#### **Data Structures**

- class DREWebService
- class PerlProcessor
- class Task
- class TaskQueue
- class TaskSet

### **5.1.1** Detailed Description

Implementation of a simple echo service

The reply of the echo service contains the string which was send to it.

	Names	pace	Docum	entation
--	-------	------	-------	----------

## **Data Structure Documentation**

#### 6.1 ARex2::ARex2Service Class Reference

The documentation for this class was generated from the following file:

• arex2.h

### 6.2 ARex::ARexGMConfig Class Reference

The documentation for this class was generated from the following file:

• a-rex/job.h

### 6.3 ARex::ARex.Job Class Reference

#include <job.h>

#### **Public Member Functions**

- ARexJob (const std::string &id, ARexGMConfig &config, Arc::Logger &logger, bool fast\_auth\_-check=false)
- **ARexJob** (Arc::XMLNode jsdl, **ARexGMConfig** &config, const std::string &credentials, const std::string &clientid, Arc::Logger &logger, Arc::XMLNode migration=Arc::XMLNode())
- std::string Failure (void)
- std::string **ID** (void)
- bool GetDescription (Arc::XMLNode &jsdl)
- bool Cancel (void)
- bool Clean (void)
- bool **Resume** (void)
- std::string **State** (void)
- std::string **State** (bool &job\_pending)
- bool Failed (void)
- std::string **SessionDir** (void)

- std::string **LogDir** (void)
- int CreateFile (const std::string &filename)
- int OpenFile (const std::string &filename, bool for\_read, bool for\_write)
- int **OpenLogFile** (const std::string &name)
- Glib::Dir \* **OpenDir** (const std::string &dirname)
- std::list< std::string > **LogFiles** (void)
- bool **UpdateCredentials** (const std::string &credentials)
- bool ChooseSessionDir (const std::string &jobid, std::string &sessiondir)

#### **Static Public Member Functions**

- static int TotalJobs (ARexGMConfig &config, Arc::Logger &logger)
- static std::list< std::string > **Jobs** (**ARexGMConfig** &config, Arc::Logger &logger)

#### **6.3.1 Detailed Description**

This class represents convenience interface to manage jobs handled by Grid Manager. It works mostly through corresponding classes and functions of Grid Manager.

#### **6.3.2** Constructor & Destructor Documentation

6.3.2.1 ARex::ARexJob::ARexJob ( const std::string & id, ARexGMConfig & config, Arc::Logger & logger, bool fast\_auth\_check = false )

Create instance which is an interface to existing job

6.3.2.2 ARex::ARexJob::ARexJob (Arc::XMLNode jsdl, ARexGMConfig & config, const std::string & credentials, const std::string & clientid, Arc::Logger & logger, Arc::XMLNode migration = Arc::XMLNode())

Create new job with provided JSDL description

#### **6.3.3** Member Function Documentation

#### 6.3.3.1 bool ARex::ARexJob::Cancel (void)

Cancel processing/execution of job

## 6.3.3.2 bool ARex::ARexJob::ChooseSessionDir ( const std::string & jobid, std::string & sessiondir )

Select a session dir to use for this job

#### 6.3.3.3 bool ARex::ARexJob::Clean (void)

Remove job from local pool

#### 6.3.3.4 int ARex::ARexJob::CreateFile ( const std::string & filename )

Creates file in job's session directory and returns handler

#### 6.3.3.5 bool ARex::ARexJob::Failed (void)

Returns true if job has failed

#### 6.3.3.6 std::string ARex::ARexJob::Failure (void) [inline]

Returns textual description of failure of last operation

#### 6.3.3.7 bool ARex::ARexJob::GetDescription ( Arc::XMLNode & jsdl )

Fills provided jsdl with job description

#### 6.3.3.8 std::string ARex::ARexJob::ID (void ) [inline]

Return ID assigned to job

## 6.3.3.9 static std::list<std::string> ARex::ARexJob::Jobs ( ARexGMConfig & config, Arc::Logger & logger ) [static]

Returns list of user's jobs. Fine-grained ACL is ignored.

#### 6.3.3.10 std::string ARex::ARexJob::LogDir (void)

Returns name of virtual log directory

#### 6.3.3.11 std::list<std::string> ARex::ARexJob::LogFiles (void)

Returns list of existing log files

#### 6.3.3.12 Glib::Dir\* ARex::ARexJob::OpenDir ( const std::string & dirname )

Opens directory inside session directory

## 6.3.3.13 int ARex::ARexJob::OpenFile ( const std::string & filename, bool for\_read, bool for\_write )

Opens file in job's session directory and returns handler

#### 6.3.3.14 int ARex::ARexJob::OpenLogFile ( const std::string & name )

Opens log file in control directory

#### 6.3.3.15 bool ARex::ARexJob::Resume (void)

Resume execution of job after error

#### 6.3.3.16 std::string ARex::ARexJob::SessionDir (void)

Returns path to session directory

#### 6.3.3.17 std::string ARex::ARexJob::State (bool & job\_pending)

Returns current state of job and sets job\_pending to true if job is pending due to external limits

#### 6.3.3.18 std::string ARex::ARexJob::State (void)

Returns current state of job

## 6.3.3.19 static int ARex::ARexJob::TotalJobs ( ARexGMConfig & config, Arc::Logger & logger ) [static]

Return number of jobs associated with this configuration. TODO: total for all user configurations.

#### 6.3.3.20 bool ARex::ARexJob::UpdateCredentials ( const std::string & credentials )

Updates job credentials

The documentation for this class was generated from the following file:

• a-rex/job.h

#### 6.4 ARex::ARexService Class Reference

The documentation for this class was generated from the following file:

· arex.h

#### 6.5 AuthEvaluator Class Reference

The documentation for this class was generated from the following file:

· auth.h

#### 6.6 AuthUser Class Reference

### 6.8 CacheConfig Class Reference

```
#include <conf_cache.h>
```

#### **Public Member Functions**

- CacheConfig (const GMEnvironment &env, std::string username="")
- CacheConfig ()
- void parseINIConf (std::string username, ConfigSections \*cf)
- void **setCacheDirs** (std::vector< std::string > cache\_dirs)

#### 6.8.1 Detailed Description

Reads conf file and provides methods to obtain cache info from it.

#### **6.8.2** Constructor & Destructor Documentation

#### 6.8.2.1 CacheConfig::CacheConfig ( const GMEnvironment & env, std::string username = "")

Create a new **CacheConfig** (p. 21) instance. Read the config file and fill in private member variables with cache parameters. If different users are defined in the conf file, use the cache parameters for the given username.

#### 6.8.2.2 CacheConfig::CacheConfig() [inline]

Empty CacheConfig (p. 21)

#### **6.8.3** Member Function Documentation

#### 6.8.3.1 void CacheConfig::parseINIConf ( std::string username, ConfigSections \* cf )

Parsers for the two different conf styles

#### 6.8.3.2 void CacheConfig::setCacheDirs ( std::vector< std::string > cache\_dirs ) [inline]

To allow for substitutions done during configuration

The documentation for this class was generated from the following file:

· conf\_cache.h

### 6.9 CacheConfigException Class Reference

#include <conf\_cache.h>

#### 6.9.1 Detailed Description

Exception thrown by constructor caused by bad cache params in conf file

The documentation for this class was generated from the following file:

· conf\_cache.h

#### 6.10 Cache::CacheService Class Reference

#include <CacheService.h>

#### **Public Member Functions**

- CacheService (Arc::Config \*cfg)
- virtual ~CacheService (void)
- virtual Arc::MCC\_Status **process** (Arc::Message &inmsg, Arc::Message &outmsg)
- bool RegistrationCollector (Arc::XMLNode &doc)
- operator bool ()
- bool operator! ()

#### **Protected Member Functions**

- Arc::MCC\_Status CacheCheck (Arc::XMLNode in, Arc::XMLNode out, const JobUser &user)
- Arc::MCC\_Status CacheLink (Arc::XMLNode in, Arc::XMLNode out, const JobUser &user, const Arc::User &mapped\_user)

### **6.10.1** Detailed Description

CacheService (p. 22) provides functionality for A-REX cache operations that can be performed by remote clients. It currently consists of two operations: CacheCheck - allows querying of the cache for the presence of files. CacheLink - enables a running job to dynamically request cache files to be linked to its working (session) directory. This is especially useful in the case of pilot job workflows where job submission does not follow the usual ARC workflow. In order for input files to be available to jobs, the pilot job can call the cache service to prepare them. If requested files are not present in the cache, they can be downloaded by the cache service if requested, using the A-REX downloader utility.

#### 6.10.2 Constructor & Destructor Documentation

#### 6.10.2.1 Cache::CacheService::CacheService ( Arc::Config \* cfg )

Make a new CacheService (p. 22). Reads the configuration and determines the validity of the service.

```
6.10.2.2 virtual Cache::CacheService::~CacheService(void) [virtual]
```

Destroy the **CacheService** (p. 22)

#### **6.10.3** Member Function Documentation

# 6.10.3.1 Arc::MCC\_Status Cache::CacheService::CacheCheck ( Arc::XMLNode in, Arc::XMLNode out, const JobUser & user ) [protected]

Check whether the URLs supplied in the input are present in any cache. Returns in the out message for each file true or false, and if true, the size of the file on cache disk.

### Parameters

user A-REX user configuration for the mapped user

# 6.10.3.2 Arc::MCC\_Status Cache::CacheService::CacheLink ( Arc::XMLNode in, Arc::XMLNode out, const JobUser & user, const Arc::User & mapped\_user ) [protected]

This method is used to link cache files to the session dir. A list of URLs is supplied and if they are present in the cache and the user calling the service has permission to access them, then they are linked to the given session directory. If the user requests that missing files be staged, then a downloader process is launched to obtain them.

#### **Parameters**

```
user A-REX user configuration for the mapped usermapped user The local user to which the client DN was mapped
```

#### 6.10.3.3 Cache::CacheService::operator bool (void) [inline]

Returns true if the **CacheService** (p. 22) is valid.

#### 6.10.3.4 bool Cache::CacheService::operator! (void) [inline]

Returns true if the **CacheService** (p. 22) is not valid.

# 6.10.3.5 virtual Arc::MCC\_Status Cache::CacheService::process ( Arc::Message & inmsg, Arc::Message & outmsg ) [virtual]

Main method called by HED when **CacheService** (p. 22) is invoked. Directs call to appropriate **CacheService** (p. 22) method.

#### 6.10.3.6 bool Cache::CacheService::RegistrationCollector ( Arc::XMLNode & doc )

Supplies information on the service for use in the information system.

The documentation for this class was generated from the following file:

· CacheService.h

### 6.11 ArcSec::Charon Class Reference

#include <charon.h>

### **Data Structures**

class PolicyLocation

#### 6.11.1 Detailed Description

A Service which includes the ArcPDP functionality; it can be deployed as an independent service to provide request evaluation functionality for the other remote services

The documentation for this class was generated from the following file:

• charon.h

#### **6.12** CommFIFO Class Reference

#### **Data Structures**

• class elem t

The documentation for this class was generated from the following file:

• commfifo.h

### 6.13 Arc::Compiler\_AREXClient Class Reference

A client class for the A-REX service.

#include <arex\_client.h>

#### **Public Member Functions**

- Compiler\_AREXClient (std::string configFile="") throw (Compiler\_AREXClientError)
- ∼Compiler\_AREXClient ()
- std::string **submit** (std::istream &jsdl\_file, Compiler\_AREXFileList &file\_list, bool delegate=false) throw (Compiler\_AREXClientError)
- std::string **stat** (const std::string &jobid) throw (Compiler\_AREXClientError)
- void kill (const std::string &jobid) throw (Compiler\_AREXClientError)
- void **clean** (const std::string &jobid) throw (Compiler\_AREXClientError)
- std::string sstat (void) throw (Compiler AREXClientError)

#### **6.13.1** Detailed Description

A client class for the A-REX service. This class is a client for the A-REX service (Arc Resource-coupled EXecution service). It provides methods for three operations on an A-REX service:

- **Job** (p. 43) submission
- Job (p. 43) status queries
- **Job** (p. 43) termination

#### 6.13.2 Constructor & Destructor Documentation

6.13.2.1 Arc::Compiler\_AREXClient::Compiler\_AREXClient ( std::string configFile = "" ) throw (Compiler\_AREXClientError)

The constructor for the Compiler\_AREXClient (p. 25) class.

This is the constructor for the **Compiler\_AREXClient** (p. 25) class. It creates an A-REX client that corresponds to a specific A-REX service, which is specified in a configuration file. The configuration file also specifies how to set up the communication chain for the client. The location of the configuration file can be provided as a parameter to the method. If no such parameter is given, the environment variable ARC\_Compiler\_AREX\_CONFIG is assumed to contain the location. If there is no such environment variable, the configuration file is assumed to be "arex\_client.xml" in the current working directory.

#### **Parameters**

configFile The location of the configuration file.

### **Exceptions**

An Compiler\_AREXClientError (p. 27) object if an error occurs.

#### 6.13.2.2 Arc::Compiler\_AREXClient::~Compiler\_AREXClient()

The destructor.

This is the destructor. It does what destructors usually do, cleans up...

#### **6.13.3** Member Function Documentation

# 6.13.3.1 void Arc::Compiler\_AREXClient::clean ( const std::string & jobid ) throw (Compiler\_AREXClientError)

Removes a job.

This method sends a request to the A-REX service to remove a job from it's pool. If job is running it will be killed by service as well.

#### **Parameters**

*jobid* The **Job** (p. 43) ID of the job to remove.

#### **Exceptions**

An Compiler\_AREXClientError (p. 27) object if an error occurs.

# 6.13.3.2 void Arc::Compiler\_AREXClient::kill ( const std::string & jobid ) throw (Compiler\_AREXClientError)

Terminates a job.

This method sends a request to the A-REX service to terminate a job.

#### **Parameters**

jobid The Job (p. 43) ID of the job to terminate.

#### **Exceptions**

An Compiler\_AREXClientError (p. 27) object if an error occurs.

# 6.13.3.3 std::string Arc::Compiler\_AREXClient::sstat ( void ) throw (Compiler\_AREXClientError)

Query the status of a service.

This method queries the A-REX service about it's status.

#### Returns

The XML document representing status of the service.

#### **Exceptions**

An Compiler\_AREXClientError (p. 27) object if an error occurs.

# 6.13.3.4 std::string Arc::Compiler\_AREXClient::stat ( const std::string & jobid ) throw (Compiler\_AREXClientError)

Query the status of a job.

This method queries the A-REX service about the status of a job.

#### **Parameters**

jobid The Job (p. 43) ID of the job.

#### Returns

The status of the job.

#### **Exceptions**

An Compiler\_AREXClientError (p. 27) object if an error occurs.

# 6.13.3.5 std::string Arc::Compiler\_AREXClient::submit ( std::istream & jsdl\_file, Compiler\_AREXFileList & file\_list, bool delegate = false ) throw (Compiler\_AREXClientError)

Submit a job.

This method submits a job to the A-REX service corresponding to this client instance.

#### **Parameters**

jsdl\_file An input stream from which the JSDL file for the job can be read.

#### Returns

The **Job** (p. 43) ID of the submitted job.

#### **Exceptions**

An Compiler\_AREXClientError (p. 27) object if an error occurs.

The documentation for this class was generated from the following file:

• arex\_client.h

# 6.14 Arc::Compiler\_AREXClientError Class Reference

An exception class for the Compiler\_AREXClient (p. 25) class.

```
#include <arex_client.h>
```

#### **Public Member Functions**

• Compiler\_AREXClientError (const std::string &what="")

### 6.14.1 Detailed Description

An exception class for the **Compiler\_AREXClient** (p. 25) class. This is an exception class that is used to handle runtime errors discovered in the **Compiler\_AREXClient** (p. 25) class.

#### **6.14.2** Constructor & Destructor Documentation

# 6.14.2.1 Arc::Compiler\_AREXClientError::Compiler\_AREXClientError ( const std::string & what = "")

Constructor.

This is the constructor of the Compiler\_AREXClientError (p. 27) class.

#### **Parameters**

what An explanation of the error.

The documentation for this class was generated from the following file:

• arex\_client.h

## 6.15 Arc::Compiler\_AREXFile Class Reference

The documentation for this class was generated from the following file:

• arex\_client.h

## 6.16 ARex::ConfGrp Class Reference

The documentation for this class was generated from the following file:

• configcore.h

## 6.17 ARex::Config Class Reference

#include <configcore.h>

#### **Public Member Functions**

- const std::list< ConfGrp > & GetConfigs () const
- std::list< std::string > ConfValue (const std::string &path) const
- std::string FirstConfValue (const std::string &path) const

#### 6.17.1 Detailed Description

Core configuration class.

#### **6.17.2** Member Function Documentation

#### 6.17.2.1 std::list<std::string> ARex::Config::ConfValue ( const std::string & path ) const

Get the configuration values from key.

#### 6.17.2.2 std::string ARex::Config::FirstConfValue ( const std::string & path ) const

Get the first configuration value from key. This is meant as a short cut when it is known that the key is not multivalued.

#### 6.17.2.3 const std::list<ConfGrp>& ARex::Config::GetConfigs ( ) const

Returns the parsed options.

The documentation for this class was generated from the following file:

· configcore.h

### 6.18 ARex::ConfigError Class Reference

#include <configcore.h>

#### **Public Member Functions**

• ConfigError (std::string message)

#### **6.18.1 Detailed Description**

Error configuration class.

#### 6.18.2 Constructor & Destructor Documentation

#### 6.18.2.1 ARex::ConfigError::ConfigError ( std::string message ) [inline]

Constructor for the **ConfigError** (p. 29) exception. Calls the corresponding constructor in ARCLibError.

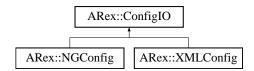

The documentation for this class was generated from the following file:

· configcore.h

### 6.19 ARex::ConfigIO Class Reference

#include <configio.h>

Inheritance diagram for ARex::ConfigIO:

#### **Public Member Functions**

- virtual Config Read (std::istream &is)=0
- virtual void Write (const Config &conf, std::ostream &os)=0

#### 6.19.1 Detailed Description

Virtual base-class for reading and writing configuration files. Concrete instances include **NGConfig** (p. 53) and **XMLConfig** (p. 70).

#### **6.19.2** Member Function Documentation

#### 6.19.2.1 virtual Config ARex::ConfigIO::Read ( std::istream & is ) [pure virtual]

Read the named configuration source.

Implemented in ARex::NGConfig (p. 53), and ARex::XMLConfig (p. 70).

# 6.19.2.2 virtual void ARex::ConfigIO::Write ( const Config & conf, std::ostream & os ) [pure virtual]

Write configuration to named configuration destination.

Implemented in ARex::NGConfig (p. 53), and ARex::XMLConfig (p. 70).

The documentation for this class was generated from the following file:

· configio.h

# 6.20 ConfigSections Class Reference

### 6.30 DREService::DREWebService Class Reference

### **Public Member Functions**

- **DREWebService** (Arc::Config \*cfg)
- virtual ~**DREWebService** (void)
- virtual Arc::MCC\_Status **process** (Arc::Message &inmsg, Arc::Message &outmsg)

#### **Protected Member Functions**

• Arc::MCC\_Status makeFault (Arc::Message &outmsg, const std::string &reason)

#### **Protected Attributes**

• Arc::NS ns\_

#### **Static Protected Attributes**

• static Arc::Logger logger

#### **6.30.1** Constructor & Destructor Documentation

#### 6.30.1.1 DREService::DREWebService::DREWebService ( Arc::Config \* cfg )

Constructor which is capable to extract prefix and suffix for the echo service.

#### 6.30.1.2 virtual DREService::DREWebService( void ) [virtual]

Destructor.

#### **6.30.2** Member Function Documentation

# 6.30.2.1 Arc::MCC\_Status DREService::DREWebService::makeFault ( Arc::Message & outmsg, const std::string & reason ) [protected]

Method to return an error. Creates a fault message and returns a status.

#### **Parameters**

outmsg outgoing message

#### Returns

Status of the result achieved

# 6.30.2.2 virtual Arc::MCC\_Status DREService::DREWebService::process ( Arc::Message & inmsg, Arc::Message & outmsg ) [virtual]

Implementation of the virtual method defined in MCCInterface (to be found in MCC.h).

#### **Parameters**

inmsg incoming messageinmsg outgoing message

#### Returns

Status of the result achieved

#### **6.30.3** Field Documentation

#### 6.30.3.1 Arc::Logger DREService::DREWebService::logger [static, protected]

Arc-intern logger. Generates output into the file specified in the arched configuration file used to invoke arched services.

#### 6.30.3.2 Arc::NS DREService::DREWebService::ns\_ [protected]

Class which specifies a XML namespace i.e. "echo". Needed to extract the content out of the incoming message

The documentation for this class was generated from the following file:

• dREWebService.h

# **6.31 Entry Class Reference**

The documentation for this class was generated from the following file:

• Entry.h

#### 6.32 ARex::FileChunks Class Reference

Representation of delivered file chunks.

#include <FileChunks.h>

#### **Public Member Functions**

- std::string **Path** (void)
- void **Size** (off t size)
- off\_t Size (void)
- void Add (off\_t start, size\_t csize)
- bool **Complete** (void)
- void **Print** (void)
- void **Release** (void)
- void Remove (void)

#### **6.32.1** Detailed Description

Representation of delivered file chunks.

### **6.32.2** Member Function Documentation

#### 6.32.2.1 void ARex::FileChunks::Release (void)

Release reference obtained through **FileChunksList::Get()** (p. 35) method. This operation may lead to destruction of FileChunk instance hence previously obtained refrence mus tnot be used.

### 6.32.2.2 void ARex::FileChunks::Remove (void)

Relases reference obtained through Get() method and destroys its instance. Normally this method to be called instead of **Release**() (p. 34) after whole file is delivered in order to free resources associated with **FileChunks** (p. 34) instance.

The documentation for this class was generated from the following file:

· FileChunks.h

### 6.33 ARex::FileChunksList Class Reference

Container for FileChunks (p. 34) instances.

#include <FileChunks.h>

#### **Public Member Functions**

- FileChunks & Get (std::string path)
- void **Timeout** (int t)
- FileChunks \* GetStuck (void)
- FileChunks \* GetFirst (void)

### **6.33.1** Detailed Description

Container for **FileChunks** (p. 34) instances.

#### **6.33.2** Member Function Documentation

#### 6.33.2.1 FileChunks& ARex::FileChunksList::Get ( std::string path )

Returns previously created **FileChunks** (p. 34) object with associated path. If such instance does not exist new one is created. Obtained reference may be used for other operations. Obtained reference must be Release()ed after it is not longer needed.

### 6.33.2.2 FileChunks\* ARex::FileChunksList::GetStuck (void)

Returns pointer to first stuck file. File is considred stuck if its Add method was last called more timeout seconds ago.

The documentation for this class was generated from the following file:

• FileChunks.h

### **6.34** FileData Class Reference

The documentation for this class was generated from the following file:

info\_types.h

### 6.61 Janitor Class Reference

Class to communicate with **Janitor** (p. 42) - Dynmaic Runtime Environment handler.

```
#include <janitor.h>
```

#### **Public Member Functions**

- Janitor (const std::string &id, const std::string &cdir, const GMEnvironment &env)
- bool enabled ()
- operator bool (void)
- bool operator! (void)
- bool deploy (void)
- bool remove (void)
- bool wait (int timeout)
- Result result (void)

#### **6.61.1** Detailed Description

Class to communicate with **Janitor** (p. 42) - Dynmaic Runtime Environment handler.

#### **6.61.2** Constructor & Destructor Documentation

# 6.61.2.1 Janitor::Janitor ( const std::string & id, const std::string & cdir, const GMEnvironment & env )

Creates instance representing job entry in **Janitor** (p. 42) database.

Takes id for job identifier and cdir for the control directory of A-Rex. constructor does not register job in the **Janitor** (p. 42). It only associates job with this instance.

#### **6.61.3** Member Function Documentation

#### 6.61.3.1 bool Janitor::deploy (void)

Registers associated job with **Janitor** (p. 42) and deploys dynamic RTEs.

This operation is asynchronous. Returned true means **Janitor** (p. 42) will be contacted and deployemnt will start soon. For obtaining result of operation see methods **wait**() (p. 43) and **result**() (p. 43). During this operation janitor utility is called with command register and optionally deploy.

#### 6.61.3.2 bool Janitor::remove (void)

Removes job from those handled by **Janitor** (p. 42) and releases associated RTEs.

This operation is asynchronous. Returned true means **Janitor** (p. 42) will be contacted and removal will start soon. For obtaining result of operation see methods **wait**() (p. 43) and **result**() (p. 43). During this operation janitor utility is called with command remove.

#### 6.61.3.3 Result Janitor::result (void)

Returns true if operation initiated by **deploy()** (p. 42) or **remove()** (p. 42) succeeded.

It should be called after **wait()** (p. 43) returned true.

#### 6.61.3.4 bool Janitor::wait ( int timeout )

Wait till operation initiated by **deploy()** (p. 42) or **remove()** (p. 42) finished.

This operation returns true if operation finished or false if timeout seconds passed. It may be called repeatedly and even after it previously returned true. If no operation is running it returns true immeaditely.

The documentation for this class was generated from the following file:

• janitor.h

### 6.62 Paul::Job Class Reference

The documentation for this class was generated from the following file:

- std::string **GetState** (void)
- std::string GetSessionDir (void)

#### 6.64.1 Detailed Description

Collect all information (status, lrms info, user) required to handle job

#### 6.64.2 Constructor & Destructor Documentation

#### **6.64.2.1 Job::Job** ( **void** )

Constructor: Creates empty job

#### **6.64.2.2 Job::Job** ( **std::string** *path* )

Constructor: load job information form files

#### 6.64.2.3 Job::∼Job ( void )

Destuction

#### **6.64.3** Member Function Documentation

#### 6.64.3.1 bool Job::Cancel (void)

Cancel processing/execution of job

#### 6.64.3.2 std::string Job::GetSessionDir (void)

Returns the session directory of the job

#### 6.64.3.3 std::string Job::GetState (void)

Returns the string represnetation of job state

#### 6.64.3.4 Job::operator bool (void ) [inline]

Helper logical operators

#### 6.64.3.5 bool Job::Resume (void)

Resume execution of job after error

#### 6.64.3.6 bool Job::Start (void)

Starts job. Most of the cases it means to submit to LRMS

The documentation for this class was generated from the following file:

• arex2/job.h

# 6.65 job\_state\_rec\_t Struct Reference

The documentation for this struct was generated from the following file:

• a-rex/grid-manager/jobs/job.h

### 6.66 ARex2::JobControl Class Reference

#include <job\_control.h>

#### 6.66.1 Detailed Description

Represents job controll information like session dir, control dir The documentation for this class was generated from the following file:

• job\_control.h

### 6.67 ARex2::JobController Class Reference

The documentation for this class was generated from the following file:

• job\_control.h

### 6.68 ARex2::JobDataCache Class Reference

#include <job\_data\_cache.h>

### 6.68.1 Detailed Description

Data cache

The documentation for this class was generated from the following file:

• job\_data\_cache.h

# 6.69 JobDescription Class Reference

### **Friends**

· class JobsList

The documentation for this class was generated from the following file:

• a-rex/grid-manager/jobs/job.h

# 6.70 ARex2::JobDescription Class Reference

#include <job\_descr.h>

#### **Data Structures**

- class InputFile
- · class Notification
- class OutputFile

#### **Public Member Functions**

• std::string & JobName (void)

#### 6.70.1 Detailed Description

Internal representation of Job (p. 43) described by JSDL

#### **6.70.2** Member Function Documentation

#### 6.70.2.1 std::string& ARex2::JobDescription::JobName(void) [inline]

Interface methods to access stored values.

The documentation for this class was generated from the following file:

• job\_descr.h

### 6.71 Paul::JobList Class Reference

The documentation for this class was generated from the following file:

• job\_list.h

# **6.72 JobLocalDescription Class Reference**

The documentation for this class was generated from the following file:

• info\_types.h

# 6.73 JobLog Class Reference

#include <job\_log.h>

### 6.73.1 Detailed Description

Put short information into log when every job starts/finishes. And store more detailed information for Reporter.

The documentation for this class was generated from the following file:

• job\_log.h

### 6.74 ARex2::JobLRMSInfo Class Reference

#include <lrms.h>

#### 6.74.1 Detailed Description

Class represents the information about job in LRMS

The documentation for this class was generated from the following file:

• lrms.h

### 6.75 Arc::JobNotFoundException Class Reference

The documentation for this class was generated from the following file:

• sched/job\_queue.h

# 6.76 JobPlugin Class Reference

Inheritance diagram for JobPlugin:

The documentation for this class was generated from the following file:

• jobplugin.h

# 6.77 Paul::JobQueue Class Reference

The documentation for this class was generated from the following file:

• paul/job\_queue.h

### 6.78 Arc::JobQueue Class Reference

The documentation for this class was generated from the following file:

• sched/job\_queue.h

## 6.79 Arc::JobQueueIterator Class Reference

The documentation for this class was generated from the following file:

• sched/job\_queue.h

### 6.80 ARex::JobRecord Class Reference

The documentation for this class was generated from the following file:

· JobRecord.h

## 6.81 Paul::JobRequest Class Reference

The documentation for this class was generated from the following file:

• paul/job\_request.h

# 6.82 Arc::JobRequest Class Reference

The documentation for this class was generated from the following file:

• sched/job\_request.h

### 6.83 Arc::JobSchedMetaData Class Reference

The documentation for this class was generated from the following file:

• sched/job\_sched\_meta.h

### 6.84 Paul::JobSchedMetaData Class Reference

The documentation for this class was generated from the following file:

• paul/job\_sched\_meta.h

# 6.85 Arc::JobSelector Class Reference

The documentation for this class was generated from the following file:

• sched/job\_queue.h

### 6.86 JobsList Class Reference

The documentation for this class was generated from the following file:

states.h

# 6.87 JobsListConfig Class Reference

```
#include <states.h>
```

### **Friends**

· class JobsList

#### **6.87.1 Detailed Description**

Class to represent information read from configuration.

The documentation for this class was generated from the following file:

· states.h

### 6.88 ARex2::JobState Class Reference

```
#include <job_state.h>
```

#### **6.88.1** Detailed Description

Represents the state of job. It includes error messages as well

The documentation for this class was generated from the following file:

• job\_state.h

### 6.89 JobUser Class Reference

The documentation for this class was generated from the following file:

• users.h

### 6.90 ARex2::JobUser Class Reference

```
#include <job_user.h>
```

### 6.90.1 Detailed Description

**Job** (p. 43) run under the privilages of one of the system user. This class collects information related to this user

The documentation for this class was generated from the following file:

• job\_user.h

# 6.91 JobUserHelper Class Reference

The documentation for this class was generated from the following file:

· users.h

### **6.92** JobUsers Class Reference

The documentation for this class was generated from the following file:

· users.h

# 6.93 gridftpd::LdapQuery Class Reference

```
#include <ldapquery.h>
```

#### **Public Types**

• enum Scope

#### **Public Member Functions**

- **LdapQuery** (const std::string &ldaphost, int ldapport, bool anonymous=true, const std::string &usersn="", int timeout=20)
- ∼LdapQuery ()
- void Query (const std::string &base, const std::string &filter="(objectclass=\*)", const std::vector< std::string > &attributes=std::vector< std::string >(), Scope scope=subtree) throw (LdapQueryError)
- void **Result** (ldap\_callback callback, void \*ref) throw (LdapQueryError)
- std::string Host ()

### 6.93.1 Detailed Description

**LdapQuery** (p. 50) class; querying of LDAP servers.

#### **6.93.2** Member Enumeration Documentation

#### 6.93.2.1 enum gridftpd::LdapQuery::Scope

Scope for a LDAP queries. Use when querying.

#### 6.93.3 Constructor & Destructor Documentation

6.93.3.1 gridftpd::LdapQuery::LdapQuery ( const std::string & *ldaphost*, int *ldapport*, bool anonymous = true, const std::string & usersn = "", int timeout = 20)

Constructs a new **LdapQuery** (p. 50) object and sets connection options. The connection is first established when calling Query.

```
6.93.3.2 gridftpd::LdapQuery::~LdapQuery()
```

Destructor. Will disconnect from the ldapserver if stll connected.

#### **6.93.4** Member Function Documentation

### 6.93.4.1 std::string gridftpd::LdapQuery::Host ( )

Returns the hostname of the ldap-server.

6.93.4.2 void gridftpd::LdapQuery::Query ( const std::string & base, const std::string & filter = " (objectclass=\*) ", const std::vector< std::string > & attributes = std::vector< std::string > (), Scope scope = subtree ) throw (LdapQueryError)

Queries the ldap server.

6.93.4.3 void gridftpd::LdapQuery::Result (  $ldap\_callback$  void \* ref ) throw (LdapQueryError)

Retrieves the result of the query from the ldap-server.

The documentation for this class was generated from the following file:

· ldapquery.h

## 6.94 gridftpd::LdapQueryError Class Reference

#include <ldapquery.h>

#### **Public Member Functions**

• LdapQueryError (std::string message)

### 6.94.1 Detailed Description

LdapQuery (p. 50) exception. Gets thrown whan an error occurs in a query.

#### 6.94.2 Constructor & Destructor Documentation

#### 6.94.2.1 gridftpd::LdapQueryError::LdapQueryError ( std::string message ) [inline]

Standard exception class constructor.

The documentation for this class was generated from the following file:

· ldapquery.h

# 6.95 RunPlugin::lib\_plugin\_t Union Reference

The documentation for this union was generated from the following file:

• a-rex/grid-manager/run/run\_plugin.h

# 6.96 gridftpd::RunPlugin::lib\_plugin\_t Union Reference

The documentation for this union was generated from the following file:

• gridftpd/run/run\_plugin.h

# 6.97 ARex::LoggerClient Class Reference

The documentation for this class was generated from the following file:

• client.h

#### 6.98 LRMSResult Class Reference

The documentation for this class was generated from the following file:

• info\_types.h

# 6.99 ISIS::Neighbor\_Container Class Reference

The documentation for this class was generated from the following file:

• isis.h

# 6.100 ARex::NGConfig Class Reference

#include <ngconfig.h>

Inheritance diagram for ARex::NGConfig:

#### **Public Member Functions**

- Config Read (std::istream &is)
- void Write (const Config &config, std::ostream &os)

#### **6.100.1** Detailed Description

Configuration class used for reading configuration files ARC-style.

### **6.100.2** Member Function Documentation

```
6.100.2.1 Config ARex::NGConfig::Read ( std::istream & is ) [virtual]
```

Read old arc.conf style configuration.

Implements ARex::ConfigIO (p. 30).

# 6.100.2.2 void ARex::NGConfig::Write ( const Config & config, std::ostream & os ) [virtual]

Write configuration to named file.

Implements **ARex::ConfigIO** (p. 30).

The documentation for this class was generated from the following file:

• ngconfig.h

# 6.101 ARex2::JobDescription::Notification Class Reference

#include <job\_descr.h>

### 6.101.1 Detailed Description

Class represents notification requiest

The documentation for this class was generated from the following file:

• job\_descr.h

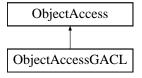

# 6.102 numvalue\_for\_shell Class Reference

The documentation for this class was generated from the following file:

• job\_desc.h

# 6.103 ObjectAccess Class Reference

Inheritance diagram for ObjectAccess:

#### **Data Structures**

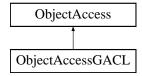

• class Item

The documentation for this class was generated from the following file:

· object\_access.h

# **6.104** ObjectAccessGACL Class Reference

Inheritance diagram for ObjectAccessGACL:

The documentation for this class was generated from the following file:

• object\_access\_gacl.h

# 6.105 ARex::OptimizedInformationContainer Class Reference

The documentation for this class was generated from the following file:

· arex.h

# 6.106 ARex::Option Class Reference

The documentation for this class was generated from the following file:

· configcore.h

## 6.107 ARex2::JobDescription::OutputFile Class Reference

#include <job\_descr.h>

### 6.107.1 Detailed Description

Class represents the one of the output file of the job

The documentation for this class was generated from the following file:

• job\_descr.h

# 6.108 gridftpd::ParallelLdapQueries Class Reference

#include <ldapquery.h>

#### **6.108.1** Detailed Description

General method to perform parallel ldap-queries to a set of clusters

The documentation for this class was generated from the following file:

• ldapquery.h

### 6.109 Paul::PaulService Class Reference

The documentation for this class was generated from the following file:

· paul.h

# 6.110 ARex::PayloadBigFile Class Reference

#### **Public Member Functions**

- PayloadBigFile (const char \*filename, Size\_t start, Size\_t end)
- virtual ~PayloadBigFile (void)

#### 6.110.1 Constructor & Destructor Documentation

6.110.1.1 ARex::PayloadBigFile::PayloadBigFile ( const char \* filename, Size\_t start, Size\_t end )

Creates object associated with file for reading from it

#### 6.110.1.2 virtual ARex::PayloadBigFile::~PayloadBigFile(void) [virtual]

Creates object associated with file for writing into it. Use size=-1 for undefined size.

The documentation for this class was generated from the following file:

· a-rex/PayloadFile.h

## 6.111 Hopi::PayloadBigFile Class Reference

#### **Public Member Functions**

- PayloadBigFile (const char \*filename, Size\_t start, Size\_t end)
- virtual ~PayloadBigFile (void)

#### **6.111.1** Constructor & Destructor Documentation

6.111.1.1 Hopi::PayloadBigFile::PayloadBigFile ( const char \* filename, Size\_t start, Size\_t end )

Creates object associated with file for reading from it

#### 6.111.1.2 virtual Hopi::PayloadBigFile::~PayloadBigFile (void) [virtual]

Creates object associated with file for writing into it. Use size=-1 for undefined size.

The documentation for this class was generated from the following file:

· hopi/PayloadFile.h

# 6.112 ARex::PayloadFile Class Reference

#include <PayloadFile.h>

#### **Public Member Functions**

- PayloadFile (const char \*filename, Size\_t start, Size\_t end)
- virtual ~**PayloadFile** (void)

#### **6.112.1** Detailed Description

Implementation of PayloadRawInterface which provides access to ordinary file. Currently only read-only mode is supported.

#### 6.112.2 Constructor & Destructor Documentation

#### 6.112.2.1 ARex::PayloadFile::PayloadFile ( const char \* filename, Size\_t start, Size\_t end )

Creates object associated with file for reading from it. Use end=-1 for full size.

#### 6.112.2.2 virtual ARex::PayloadFile::~PayloadFile (void) [virtual]

Creates object associated with file for writing into it. Use size=-1 for undefined size.

The documentation for this class was generated from the following file:

· a-rex/PayloadFile.h

### **6.113** Hopi::PayloadFile Class Reference

```
#include <PayloadFile.h>
```

#### **Public Member Functions**

- PayloadFile (const char \*filename, Size\_t start, Size\_t end)
- virtual ~**PayloadFile** (void)

#### **6.113.1** Detailed Description

Implementation of PayloadRawInterface which provides access to ordinary file. Currently only read-only mode is supported.

#### 6.113.2 Constructor & Destructor Documentation

#### 6.113.2.1 Hopi::PayloadFile::PayloadFile ( const char \* filename, Size\_t start, Size\_t end )

Creates object associated with file for reading from it. Use end=-1 for full size.

#### 6.113.2.2 virtual Hopi::PayloadFile::~PayloadFile (void) [virtual]

Creates object associated with file for writing into it. Use size=-1 for undefined size.

The documentation for this class was generated from the following file:

· hopi/PayloadFile.h

### 6.114 DREService::PerlProcessor Class Reference

#### **Data Structures**

• struct ThreadInterface

#### **Public Member Functions**

- PerlProcessor (int threadNumber, TaskQueue \*pTaskQueue, TaskSet \*pTaskSet)
- virtual ~PerlProcessor (void)

#### 6.114.1 Constructor & Destructor Documentation

6.114.1.1 DREService::PerlProcessor::PerlProcessor ( int threadNumber, TaskQueue \* pTaskQueue, TaskSet \* pTaskSet )

Constructor which is capable to extract prefix and suffix for the echo service.

#### 6.114.1.2 virtual DREService::PerlProcessor::~PerlProcessor(void) [virtual]

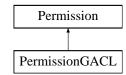

Destructor.

The documentation for this class was generated from the following file:

• PerlProcessor.h

### **6.115** Permission Class Reference

Inheritance diagram for Permission:

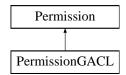

The documentation for this class was generated from the following file:

· permission.h

## 6.116 PermissionGACL Class Reference

Inheritance diagram for PermissionGACL:

The documentation for this class was generated from the following file:

• permission\_gacl.h

## **6.117** Policy Class Reference

The documentation for this class was generated from the following file:

· Policy.h

# 6.118 ArcSec::Charon::PolicyLocation Class Reference

The documentation for this class was generated from the following file:

· charon.h

## 6.119 GridScheduler::Resource Class Reference

The documentation for this class was generated from the following file:

· resource.h

# 6.120 GridScheduler::ResourcesHandling Class Reference

The documentation for this class was generated from the following file:

• resources\_handling.h

# 6.121 ContinuationPlugins::result\_t Class Reference

The documentation for this class was generated from the following file:

· plugins.h

## **6.122 RTE Class Reference**

#include <rte.h>

## **Public Member Functions**

- RTE (const std::string &re)
- $\sim$ RTE()
- std::string str () const
- std::string Name () const
- std::string Version () const
- bool **operator**== (const **RTE** &other) const
- bool **operator!=** (const **RTE** &other) const
- bool operator> (const RTE &other) const
- bool operator< (const RTE &other) const
- bool **operator**>= (const **RTE** &other) const
- bool operator <= (const RTE & other) const

## **6.122.1** Detailed Description

Interface for handling runtime environments. **RTE** (p. 60) class. It represents a runtime environment, and provides functionality for getting information about them.

#### 6.122.2 Constructor & Destructor Documentation

## 6.122.2.1 RTE::RTE ( const std::string & re )

Constructs a new runtime environemt. String should in general be of the type: STRING-VERSION. Where version consists of numbers with . between them.

## 6.122.2.2 RTE:: $\sim$ RTE ( )

Destructor. Not that much to say.

### **6.122.3** Member Function Documentation

### 6.122.3.1 std::string RTE::Name ( ) const

Returns the name of the runtime environment.

## 6.122.3.2 bool RTE::operator!= ( const RTE & other ) const

Inequility operator. Return the opsite of ==

## $\textbf{6.122.3.3} \quad bool \ RTE \textbf{::operator} < ( \ const \ RTE \ \& \ \textit{other} \ ) \ const$

Less than operator. Returns false if the other is equal, otherwise it returns the opposite of >

#### 6.122.3.4 bool RTE::operator<= ( const RTE & other ) const

Less than or equal operator. Returns the oppsite of >

### 6.122.3.5 bool RTE::operator== ( const RTE & other ) const

Equliaty operator. Returns true if the runtime environments have the string representation.

### 6.122.3.6 bool RTE::operator> ( const RTE & other ) const

Greater than operator. Returns true if the compared runtime environment is greater than the current.

### 6.122.3.7 bool RTE::operator>= ( const RTE & other ) const

Greater or equal operator. Returns the opposite of <

## 6.122.3.8 std::string RTE::str ( ) const

Returns a string representation of the runtime environment. This is usually the same as given in the constructor.

### 6.122.3.9 std::string RTE::Version ( ) const

Returns the version of the runtime environment.

The documentation for this class was generated from the following file:

• rte.h

## **6.123 RunFunction Class Reference**

The documentation for this class was generated from the following file:

• run\_function.h

## 6.124 RunParallel Class Reference

The documentation for this class was generated from the following file:

• run\_parallel.h

# 6.125 gridftpd::RunPlugin Class Reference

## **Data Structures**

• union lib\_plugin\_t

The documentation for this class was generated from the following file:

• gridftpd/run/run\_plugin.h

## 6.126 RunPlugin Class Reference

### **Data Structures**

• union lib\_plugin\_t

The documentation for this class was generated from the following file:

• a-rex/grid-manager/run/run\_plugin.h

## 6.127 RunPlugins Class Reference

The documentation for this class was generated from the following file:

• a-rex/grid-manager/run/run\_plugin.h

## 6.128 RunRedirected Class Reference

The documentation for this class was generated from the following file:

· run\_redirected.h

## **6.129 Server Class Reference**

The documentation for this class was generated from the following file:

• Server.h

## 6.130 FileRoot::ServerParams Class Reference

The documentation for this class was generated from the following file:

• fileroot.h

# 6.131 ArcSec::Service\_AA Class Reference

#include <aaservice.h>

## **6.131.1** Detailed Description

A Service which includes the AttributeAuthority functionality; it accepts the <samlp:AttributeQuery> which includes the <Subject> of the principal from the request and <Attribute> which the request would get; it access some local attribute database and returns <samlp:Assertion> which includes the <Attribute>

The documentation for this class was generated from the following file:

· aaservice.h

## 6.132 Compiler::Service\_Compiler Class Reference

#include <compiler.h>

#### **Public Member Functions**

- Service\_Compiler (Arc::Config \*cfg)
- virtual Arc::MCC\_Status **process** (Arc::Message &, Arc::Message &)

## **6.132.1 Detailed Description**

This service need in the server config a "compiler:scriptfile\_url" element. It is the scriptfile place, wherefrom it will be download the JSDL.

## 6.132.2 Constructor & Destructor Documentation

6.132.2.1 Compiler::Service\_Compiler::Service\_Compiler ( Arc::Config \* cfg )

Constructor accepts configuration describing content of scriptfile\_url

### **6.132.3** Member Function Documentation

6.132.3.1 virtual Arc::MCC\_Status Compiler::Service\_Compiler::process ( Arc::Message & , Arc::Message & ) [virtual]

Service request processing routine

The documentation for this class was generated from the following file:

· compiler.h

## 6.133 ArcSec::Service\_Delegation Class Reference

A Service which launches the proxy certificate request; it accepts the request from.

#include <delegation.h>

## 6.133.1 Detailed Description

A Service which launches the proxy certificate request; it accepts the request from.

The documentation for this class was generated from the following file:

· delegation.h

# 6.134 Arc::Service\_JavaWrapper Class Reference

#### **Public Member Functions**

• virtual Arc::MCC\_Status **process** (Arc::Message &, Arc::Message &)

#### **6.134.1** Member Function Documentation

# 6.134.1.1 virtual Arc::MCC\_Status Arc::Service\_JavaWrapper::process ( Arc::Message & , Arc::Message & ) [virtual]

Service request processing routine

The documentation for this class was generated from the following file:

· javawrapper.h

# 6.135 Arc::Service\_PythonWrapper Class Reference

## **Public Member Functions**

• virtual Arc::MCC\_Status **process** (Arc::Message &, Arc::Message &)

### **6.135.1** Member Function Documentation

# 6.135.1.1 virtual Arc::MCC\_Status Arc::Service\_PythonWrapper::process ( Arc::Message & , Arc::Message & ) [virtual]

Service request processing routine

The documentation for this class was generated from the following file:

pythonwrapper.h

## 6.136 ArcSec::Service\_SLCS Class Reference

#include <slcs.h>

## **6.136.1** Detailed Description

A Service which signs the short-lived certificate; it accepts the certificate signing request (CSR) from from client side through soap, signs a short-lived certificate and sends back through soap. This service is supposed to be deployed together with the SPService and saml2sso.serviceprovider handler, in order to sign certificate based on the authentication result from saml2sso profile. Also the saml attribute (inside the saml assertion from saml2sso profile) will be put into the signed short-lived certificate. By deploying this service together with SPService and saml2sso.serviceprovider handler, we can get the convertion from username/password -----> x509 certificate.

The documentation for this class was generated from the following file:

slcs.h

## **6.137** SPService::Service\_SP Class Reference

#include <SPService.h>

#### **Public Member Functions**

- Service\_SP (Arc::Config \*cfg)
- virtual Arc::MCC\_Status **process** (Arc::Message &, Arc::Message &)

## **6.137.1** Detailed Description

This is service which accepts HTTP request from user agent (web browser) in the client side and processes the functionality of Service Provider in SAML2 SSO profile --- composing <AuthnRequest> Note: the IdP name is provided by the user agent directly when it gives a request, instead of the WRYF(where are you from) or Discovery Service in other implementation

#### 6.137.2 Constructor & Destructor Documentation

6.137.2.1 SPService::Service\_SP::Service\_SP ( Arc::Config \* cfg )

Constructor

## **6.137.3** Member Function Documentation

6.137.3.1 virtual Arc::MCC\_Status SPService::Service\_SP::process ( Arc::Message & , Arc::Message & ) [virtual]

Service request processing routine

The documentation for this class was generated from the following file:

• SPService.h

# 6.138 SimpleMap Class Reference

The documentation for this class was generated from the following file:

• simplemap.h

# 6.139 Paul::SysInfo Class Reference

The documentation for this class was generated from the following file:

• sysinfo.h

## 6.140 DREService::Task Class Reference

### **Public Member Functions**

- Task (int taskID, Arc::Message \*request, Arc::Message \*response)
- virtual ∼Task (void)

### 6.140.1 Constructor & Destructor Documentation

6.140.1.1 DREService::Task::Task ( int taskID, Arc::Message \* request, Arc::Message \* response )

Constructor which is capable to extract prefix and suffix for the echo service.

## 6.140.1.2 virtual DREService::Task::~Task( void ) [virtual]

Destructor.

The documentation for this class was generated from the following file:

· Task.h

# 6.141 DREService::TaskQueue Class Reference

### **Public Member Functions**

- TaskQueue (int length)
- virtual ~TaskQueue (void)
- int pushTask (Task \*task)
- Task \* shiftTask ()

#### **6.141.1** Constructor & Destructor Documentation

### 6.141.1.1 DREService::TaskQueue::TaskQueue ( int length )

Constructor which is capable to extract prefix and suffix for the echo service.

### 6.141.1.2 virtual DREService::TaskQueue::~TaskQueue( void ) [virtual]

Destructor.

### **6.141.2** Member Function Documentation

#### 6.141.2.1 int DREService::TaskQueue::pushTask ( Task \* task )

Blocks, if taskqueue is full. If task is stored in the queue and had a taskID == -1 it gets a fresh taskID.

#### 6.141.2.2 Task\* DREService::TaskQueue::shiftTask()

Shifts the first task from the queue (and removes it).

The documentation for this class was generated from the following file:

· TaskQueue.h

## 6.142 DREService::TaskSet Class Reference

### **Public Member Functions**

- TaskSet (int size)
- virtual ∼**TaskSet** (void)
- Task \* removeTask (int)

## 6.142.1 Constructor & Destructor Documentation

## 6.142.1.1 DREService::TaskSet::TaskSet (int size)

Constructor which is capable to extract prefix and suffix for the echo service.

## 6.142.1.2 virtual DREService::TaskSet::~TaskSet(void) [virtual]

Destructor.

### **6.142.2** Member Function Documentation

### 6.142.2.1 Task\* DREService::TaskSet::removeTask ( int )

Checks wheter there is a task in the queue having that taskID in order to return it. If such a taskID is not available, themethod blocks until such a taskID is available. The task will be removed from the stack in

that case.

The documentation for this class was generated from the following file:

· TaskSet.h

# 6.143 UnixMap Class Reference

#### **Data Structures**

- struct source\_t
- class unix\_user\_t

The documentation for this class was generated from the following file:

• unixmap.h

## 6.144 gridftpd::UrlMapConfig Class Reference

The documentation for this class was generated from the following file:

• gridftpd/conf/conf\_map.h

# 6.145 UrlMapConfig Class Reference

The documentation for this class was generated from the following file:

• a-rex/grid-manager/conf/conf\_map.h

## 6.146 userspec\_t Class Reference

The documentation for this class was generated from the following file:

• userspec.h

# 6.147 value\_for\_shell Class Reference

The documentation for this class was generated from the following file:

• job\_desc.h

## 6.148 voms Struct Reference

#include <auth.h>

### **Data Fields**

- std::string server
- std::string voname
- std::vector< voms\_attrs > std

## 6.148.1 Detailed Description

VOMS data

### **6.148.2** Field Documentation

## 6.148.2.1 std::string voms::server

The VOMS server DN, as from its certificate

## 6.148.2.2 std::vector<voms\_attrs> voms::std

User's characteristics

## 6.148.2.3 std::string voms::voname

The name of the VO to which the VOMS belongs

The documentation for this struct was generated from the following file:

• auth.h

## 6.149 voms\_attrs Struct Reference

#include <auth.h>

## **Data Fields**

- std::string group
- std::string role
- std::string cap

## 6.149.1 Detailed Description

VOMS attributes

## 6.149.2 Field Documentation

### 6.149.2.1 std::string voms\_attrs::cap

user's capability

#### 6.149.2.2 std::string voms\_attrs::group

user's group

### 6.149.2.3 std::string voms\_attrs::role

user's role

The documentation for this struct was generated from the following file:

· auth.h

# 6.150 ARex::XMLConfig Class Reference

#include <xmlconfig.h>

Inheritance diagram for ARex::XMLConfig:

### **Public Member Functions**

- Config Read (std::istream &is)
- void Write (const Config &config, std::ostream &os)

## 6.150.1 Detailed Description

Class for reading in configuration files in xml-format. It uses libxml2 for xml-parsing.

#### **6.150.2** Member Function Documentation

## 6.150.2.1 Config ARex::XMLConfig::Read ( std::istream & is ) [virtual]

Read configuration.

Implements **ARex::ConfigIO** (p. 30).

# 6.150.2.2 void ARex::XMLConfig::Write ( const Config & config, std::ostream & os ) [virtual]

Write configuration.

Implements ARex::ConfigIO (p. 30).

The documentation for this class was generated from the following file:

· xmlconfig.h

# 6.151 ZeroUInt Class Reference

#include <states.h>

# **6.151.1** Detailed Description

**ZeroUInt** (p. 71) is a wrapper around unsigned int. It provides a consistent default value, as int type variables have no predefined value assigned upon creation. It also protects from potential counter underflow, to stop counter jumping to MAX\_INT.

The documentation for this class was generated from the following file:

• states.h

# **Chapter 7**

# **File Documentation**

# 7.1 configcore.h File Reference

```
#include <iostream>
#include <list>
#include <map>
#include <string>
#include <arc/Logger.h>
```

## **Data Structures**

- class ARex::ConfigError
- class ARex::Option
- class ARex::ConfGrp
- class ARex::Config

## **Functions**

- Config ARex::ReadConfig (std::istream &is)
- Config ARex::ReadConfig (const std::string &filename)

## 7.1.1 Detailed Description

This file describes the core configuration

# **Index**
